CustomerPaymentMethodsByInternalId

Get a specific customer by internalIDData for the customer The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: Customer

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerPaymentMethodsByInternalId. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
internalID		☑		Identifies the customer

Columns of Table Function

The columns of the table function CustomerPaymentMethodsByInternalId are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
acceptAutoInvoices	char	Accept Auto-invoices	☐	Invoicing settings > Print and email settings section > Send invoices to AutoInvoice > Select this check box if you are using AutoInvoice and want to send invoices directly to this service.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
accountReference	varchar2	Account Reference	☐	General information tab > Main contact section > Account ref. > Your company's account number in the customer's system.
COMPANY_CODE	varchar2(30)	Company Code	☑	Partition code, segmenting the data.
COMPANY_NAME	varchar2(240)	Company Name	☑	Name of the partition.
corporateId	varchar2	Corporate ID	☐	Delivery settings tab > Default location settings section > Corporate ID > The customers company ID, associated with the location.
createdDateTime	datetime	Created	☐	Information collected from the system. Not visible on the screen.
creditDaysPastDue	int32	Credit Days Past Due	☐	General information tab > Credit verification rules section > Credit days past due > The maximum number of days by which the customer payment may exceed the invoice date.
creditLimit	double	Credit Limit	☐	The General information tab > Credit verification rules section > Credit limit > The amount, if applicable, that serves as a credit limit for the customer.
creditTerms_description	varchar2	Credit Terms Description	☐	Click on the magnifier. > The description.
creditTerms_id	varchar2	Credit Terms ID	☐	Click on the magnifier. > The identifier.
creditVerification	varchar2	Credit Verification	☐	The General information tab > Credit verification rules > Credit verification > The credit rule applied to this customer. The following options are available: Days past due, Credit limit, Limit and days past due, disabled.
currencyId	varchar2	Currency ID	☐	The General information tab > Financial settings section > Currency ID > The currency used in operations with the customer, which you can select from the list of currencies defined in the system.
customerClass_description	varchar2	Customer Class Description	☐	Click on the magnifier. > The description.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function Customers. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
attributes		☐		Attributes (additional information) connected to the entity.Examples: {{base}}/customer?attributes={"AttributeID":"ValueID","AttributeID":"ValueID"} {{base}}/customer?attributes={"AttributeID":"ValueID1,ValueID2"}
corporateId		☐		Equals Corporate ID from Delivery settings tab.
createdDateTime		☐		This value, generated by the system, indicates the creation date and time. Use it to retrieve all records that have been

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Required	Default Value	Documentation
				created since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
createdDateTimeCondition		□		This value represents the condition to be applied w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
email		□		Equals Email for customer.
expandAccountInformation		□		
expandDirectDebit		□		Expand direct debit info
expandPaymentMethods		□		
greaterThanValue		□		This field does not w ork and has been deprecated. It w ill be removed in future versions.
lastModifiedDateTime		□		This value, generated by the system, indicates the last time the record w as modified. Use it to retrieve all records that have been modified since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __LastModifiedDateTime__ and __LastModifiedDateTimeCondition__ are __mutually inclusive__.
lastModifiedDateTimeCondition		□		This value represents the condition to be applied w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __LastModifiedDateTime__ and __LastModifiedDateTimeCondition__ are __mutually inclusive__.
name		□		Contains Customer name.
phone		□		Equals Phone 1 for customer.
status		□		Drop dow n and select Status. (Values: Active, OnHold,

CustomerSalesOrderBasicAttachmentsByCustomerCode: Visma.net Financials Customer Sales Order Attachments by Customer Code

Get a range of SO Orders Basic of a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Sales Order Attachments by Customer Code

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerSalesOrderBasicAttachmentsByCustomerCode. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

CustomerSalesOrderBasicLinesByCustomerCode: Visma.net Financials Customer Sales Order Lines by Customer Code

Get a range of SO Orders Basic of a specific customer

Catalog: VismaNet

Schema: Customer

Label: Customer Sales Order Lines by Customer Code

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerSalesOrderBasicLinesByCustomerCode. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
customerCd		☑		
greaterThanValue		☐		Filter on Order no. greater than value.
lastModifiedDateTime		☐		This value, generated by the system, indicates the last time the record w as modified. Use it to retrieve all records that have been modified since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __LastModifiedDateTime__ and __LastModifiedDateTimeConditio n__ are __mutually inclusive__.
lastModifiedDateTimeCondition		☐		This value represents the condition to be applied w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __LastModifiedDateTime__ and __LastModifiedDateTimeConditio n__ are __mutually inclusive__.
orderBy		☐		This field has been deprecated and w ill be removed in future versions. The OrderBy parameter has no effect on the result.
orderType		☐		Filter by Order type.
show Notes		☐		Set to true to include notes.
status		☐		Select to filter on status on order. (Values: Open, Hold, CreditHold, Completed, Cancelled, BackOrder, Shipping, Invoiced, PendingApproval, Voided)

CustomerContractRecurringSummaryByContractId: Visma.net Financials Customer Contract Recurring Summaries by Contract ID

Get a specific Customer Contract Recurring Summary

Catalog: VismaNet

Schema: CustomerContract

Label: Customer Contract Recurring Summaries by Contract ID

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerContractRecurringSummaryByContractId. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation

vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.
voided	char		☐	

CustomerCreditNoteApplicationsByCreditNoteNumber: Visma.net Financials Customer Credit Note Applications by Credit Note Number

Get a specific Customer Credit NoteData for Customer Credit Note The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Note Applications by Credit Note Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteApplicationsByCreditNoteNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
creditNoteNumber		☑		Identifies the Customer Credit Note

Columns of Table Function

The columns of the table function CustomerCreditNoteApplicationsByCreditNoteNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active	char	Account Active	☐	
account_description	varchar2	Account Description	☐	Name of item/description
account_externalCode1	varchar2	Account External Code 1	☐	Account class > The identifier of the account class.

CustomerCreditNoteAttachments: Visma.net Financials Customer Credit Note Attachments

Get a range of Customer Credit Notes - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeData for Customer Credit Note

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Note Attachments

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteAttachments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

CustomerCreditNoteByNumber: Visma.net Financials Customer Credit Notes by Number

Get a specific Customer Credit NoteData for Customer Credit Note The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerCreditNote

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Label: Customer Credit Notes by Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteByNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

status		☐		The status of the document. Use the dropdow n to select status. (Values: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerCreditNoteLineAttachments are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active_2	char	Account Active 2	☐	
account_active	char	Account Active	☐	
account_description_2	varchar2	Account Description 2	☐	Name of item/description
account_description	varchar2	Account Description	☐	Name of item/description
account_externalCode1_2	varchar2	Account External Code 1 2	☐	Account class > The identifier of the account class.
account_externalCode1	varchar2	Account External Code 1	☐	Account class > The identifier of the account class.
account_externalCode2_2	varchar2	Account External Code 2 2	☐	Account class > The name of the account class.
account_externalCode2	varchar2	Account External Code 2	☐	Account class > The name of the account class.
account_number_2	varchar2	Account Number 2	☐	Number of item
account_number	varchar2	Account Number	☐	Number of item
account_type_2	varchar2	Account Type 2	☐	Account > The account number.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
account_type	varchar2	Account Type	☐	Account > The account number.
amount_2	double		☐	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 w indow .If the check box is cleared, then the value appears w hen the document status is Open.
amount	double	Amount	☐	Amount > The amount after the discount has been applied. The value of this read-only boxis calculated automatically by deducting the discount amount from the extended price.
amountInCurrency_2	double	Amount in Currency 2	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
amountInCurrency	double	Amount in Currency	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	☐	The top part > Balance > For an open customer ledger document, the balance after any cash discount w as taken. For a document used in the application process, this is the balance after the payments w ere applied.
balanceInCurrency	double	Balance in Currency	☐	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name_2	varchar2	Branch Number Name 2	☐	Click the magnifier. > The name.
branchNumber_name	varchar2	Branch Name	☐	Click the magnifier. > The name.
branchNumber_number_2	varchar2	Branch Number 2	☐	Click the magnifier. > The identifier.
branchNumber_number	varchar2	Branch Number	☐	Click the magnifier. > The identifier.
cashAccount	varchar2	Cash Account	☐	Financial details tab > The payment information section > Cash account > The cash account associated w ith the payment method.
cashDiscount	double	Cash Discount	☐	The top part > Cash discount > The cash discount amount

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	☐	The top part > Cash discount date* > The end date of the cash discount period, which the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	☐	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
childRecord_name	varchar2		☐	Click the magnifier. > The name.
childRecord_number	varchar2		☐	Click the magnifier. > The identifier.
closedFinancialPeriod	varchar2	Closed Financial Period	☐	Format YYYYMM.
COMPANY_CODE	varchar2(30)	Company Code	☑	Partition code, segmenting the data.
COMPANY_NAME	varchar2(240)	Company Name	☑	Name of the partition.
contact_id	int32	Contact ID	☐	Click the magnifier > The identifier
contact_name	varchar2	Contact Name	☐	Click the magnifier > The displayed name
cost	double	Cost	☐	Cost > The total cost of the line in default currency. The value will always be 0 for unreleased documents.
createdDateTime	datetime	Created	☐	The Attachments tab > Creation time > The date the attachment was created.
creditTerms_description	varchar2	Credit Terms Description	☐	Click on the magnifier. > The description.
creditTerms_id	varchar2	Credit Terms ID	☐	Click on the magnifier. > The identifier.
currencyId	varchar2	Currency ID	☐	The top part > Currency > The currency of the document. By default, it is the customer's default currency,but it can be changed if the Allow Currency Override check box is selected in the AR303000 window.
customer_name	varchar2	Customer Name	☐	Click the magnifier. > The name.
customer_number	varchar2	Customer Number	☐	
customerProject	varchar2	Customer Project	☐	The top part > Customer project no. > The customer project no. used in AutoInvoice.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
customerRefNumber	varchar2	Custom Reference Number	☐	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	varchar2	VAT Zone Description	☐	Click on the magnifier. > The description.
customerVatZone_id	varchar2	VAT Zone ID	☐	Click on the magnifier. > The identifier.
deductableAmount	double		☐	
deferralCode	varchar2		☐	The deferral code assigned to the stock item or non-stock item specified in thisdocument line.Upon release of the document, the system generates a deferralschedule (or schedules) based on the settings defined in this deferral code.
deferralSchedule	int32		☐	Original deferral schedule > A read-only column filled in by the system in the Cash return documents created by the reversing process. It shows the identifier of the deferral schedule associated with the original Cash sale document.
description	varchar2	Description	☐	Transaction descr. > Any brief comment relevant to the transaction.The alphanumeric string may contain up to 30 characters.
detailTotal	double	Detail Total	☐	The top part > Detail total > The document total, which the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	☐	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
discountAmount	double		☐	Discount amount > The amount of the line-level discount that has been applied manually orautomatically to this line.The system selects the Manual Discount check boxand calculates the line amount after you have entered the discount amountmanually and save your changes or added a new line.
discountAmountInCurrency	double		☐	Background calculation giving you the Discount amount in your default currency. This field is applicable if the amount is given in another currency than your default.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
discountCode	varchar2	Discount Code	☐	The code of the line discount that has been applied to this line automatically or manually.
discountPercent	double	Discount Percent	☐	Discount percent > The percent of the line-level discount that has been applied manually orautomatically.The system selects the Manual Discount check box andcalculates the discount amount after you have entered the percent manually andsaved your changes or added a new line.
discountTotal	double	Discount Total	☐	The top part > Discount total > The document discount total.
discountTotalInCurrency	double	Discount Total in Currency	☐	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	☐	The top part > Date* > The date w hen the customer ledger document w as created.By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	☐	The top part > Due date* > The date w hen payment for the document is due, in accordance w ith the credit terms.
documentType	varchar2	Document Type	☐	The top part > Type > The document type. The follow ing types are available: invoice, debit note, credit note, overdue charge, credit w rite-off
dontEmail	char	Don't Email	☐	
dontPrint	char	Don't Print	☐	
dunningLetterDate	datetime	Dunning Letter Date	☐	The Financial details tab > The Dunning information section > Dunning letter date > The date of the last released dunning letter in w hich the document w as listed.
dunningLetterLevel	int32	Dunning Letter Level	☐	The Financial details tab > The Dunning information section > Dunning level > The dunning level of the document.
errorInfo	varchar2	Error Message	☐	
exchangeRate	double	Exchange Rate	☐	The top part > Currency > The middle field, click the dow n arrow > Exchange rate - To change the currency rate, click the arrow by the rate to invoke the Rate selection dialog box.
externalLink	varchar2		☐	

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
externalReference	varchar2	External Reference	☐	The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	varchar2	Financial Period	☐	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	char	Hold	☐	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document with the On Hold status may be edited and cannot be released.
id	guid	ID	☐	The ID of the attachment
inventoryNumber	varchar2	Inventory Number	☐	Item ID > The item ID of the line item, if applicable. Only a non-stock item can be selected.
invoiceAddress_addressId	int32	Invoice Address ID	☐	
invoiceAddress_addressLine1	varchar2	Invoice Address Line 1	☐	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	varchar2	Invoice Address Line 2	☐	Address 2 > The second line of the address.
invoiceAddress_addressLine3	varchar2	Invoice Address Line 3	☐	Address 3 > The third line of the address.
invoiceAddress_city	varchar2	Invoice Address City	☐	City > The city.
invoiceAddress_country_errorInfo	varchar2	Invoice Address Country Error Information	☐	
invoiceAddress_country_id	varchar2	Invoice Address Country ID	☐	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		☐	
invoiceAddress_country_metadata_totalCount	int64		☐	
invoiceAddress_country_name	varchar2	Invoice Address Country Name	☐	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	varchar2	Invoice Address County ID	☐	Click the magnifier > The identifier
invoiceAddress_county_name	varchar2	Invoice Address County Name	☐	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	char		☐	Override address > A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	varchar2	Invoice Address Postal Code	☐	Postcode > The postcode.
invoiceContact_attention	varchar2	Invoice Contact Attention	☐	

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
invoiceContact_businessName	varchar2		☐	
invoiceContact_contactId	int32	Invoice Contact ID	☐	
invoiceContact_email	varchar2	Invoice Contact Email Address	☐	
invoiceContact_overrideContact	char		☐	
invoiceContact_phone1	varchar2	Invoice Contact Phone 1	☐	
invoiceText	varchar2	Invoice Text	☐	The top part > Invoice text > Any user-provided description of the customer ledger document.
isRotRutDeductible_2	char	Is ROTRUT Deductible 2	☐	The top part > Domestic services deductible document > A check box indicating if the document is Rot/rut deductible (applicable for the Swedish markets)
isRotRutDeductible	char		☐	
itemType	varchar2	Item Type	☐	
lastModifiedDateTime	datetime	Last Modified	☐	System generated field for last modification date/time of document.
lineNumber	int32	Line Number	☐	Line no. > A counter of lines in the overview of cash sales document overview .
location_countryId	varchar2	Location Country ID	☐	Location*.
location_id	varchar2	Location ID	☐	Click the magnifier > The identifier
location_name	varchar2	Location Name	☐	Click the magnifier > The displayed name
manualAmount	double	Manual Amount	☐	Manual amount > a check box indicating that the amount has been entered manually.
manualAmountInCurrency	double		☐	Background calculation giving you the Manual amount in your default currency. This field is applicable if the amount is given in another currency than your default.
manualDiscount	char	Manual Discount	☐	Manual discount > A check box that indicates (if selected) that the discount has been appliedmanually.If you clear the check box, the system clears entered discount percent,or discount amount, or selected discount code.
metadata_maxPageSize	int64	Metadata Max Pagesize	☐	
metadata_totalCount	int64	Total Count	☐	
name	varchar2	Name	☐	The name of the attachment.
note_2	varchar2	Note 2	☐	Icon Notes on top of the window > Pop-up window for

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				providing any user-defined text connected to the document.
note	varchar2	Note	☐	Table > Icon Notes > Pop-up w indow for providing any user-defined text connected to the order.
origInvoiceDate	datetime	Original Invoice Date	☐	The top part > Orig invoice date > The date based on w hich the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences.By default, for a new document, it is the current business date, but you can change the date.
paymentMethod_description	varchar2	Payment Method Description	☐	Click on the magnifier. > The description.
paymentMethod_id	varchar2	Payment Method ID	☐	Click on the magnifier. > The identifier.
paymentReference	varchar2	Payment Reference	☐	///The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance w ith the number series assigned to cash sales in the Customer ledger preferences w indow ..
postPeriod	varchar2	Post Period	☐	The top part > Post period > The period to w hich the document should be posted. Format YYYYMM.
project_description	varchar2	Project Description	☐	Click on the magnifier. > The description.
project_id	varchar2	Project ID	☐	Click on the magnifier. > The identifier.
project_internalId	int32		☐	The internal identifier.
projectTask_description	varchar2	Project Task Description	☐	Click on the magnifier. > The description.
projectTask_id	varchar2	Project Task ID	☐	Click on the magnifier. > The identifier.
projectTask_internalId	int32		☐	The internal identifier.
quantity	double	Quantity	☐	Quantity > The quantity of items (goods or services) of a particular type sold to the customer.
referenceNumber	varchar2	Reference Number	☐	The Top part > Ref. no. > The reference number of the customer ledger document in the system.
revision	int32	Revision	☐	The version of the attachment.
revoked	char	Revoke	☐	
roundingDiff	double	Rounding Difference	☐	The top part > Rounding diff. > The difference betw een the

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				original amount and the rounded amount.
salesPerson_2_description	varchar2	Salesperson 2 Description	☐	Click on the magnifier. > The description.
salesPerson_2_id	varchar2	Salesperson 2 ID	☐	Click on the magnifier. > The identifier.
salesperson	varchar2	Salesperson	☐	The field is deprecated for customer document endpoints, please use Seller instead
salesPersonDescr	varchar2	Sales Person Name	☐	The field is deprecated for customer document endpoints, please use SalesPerson instead
salesPersonID	int32	Sales Person ID	☐	The field is deprecated for customer document endpoints, please use SalesPerson instead
seller_description	varchar2	Seller Description	☐	Click on the magnifier. > The description.
seller_id	varchar2	Seller ID	☐	Click on the magnifier. > The identifier.
sendToAutoInvoice	char	Send to Auto-invoice	☐	The Attachment tab > Send the file to AutoInvoice > The selected files w ill be attached to the invoice.
soOrderNbr	varchar2		☐	
soOrderType	varchar2		☐	
soShipmentNbr	varchar2		☐	
status	varchar2	Status	☐	The top part > Status > The status of the document, w hich can be one of the follow ing: Hold, Balanced, Voided, Scheduled, Open, Closed, Pending print, Pending email.
subaccount_active_2	char	Sub Account Active 2	☐	Active > The status of the identifier.
subaccount_active	char	Sub Account Active 2	☐	Active > The status of the identifier.
subaccount_description_2	varchar2	Sub Account Description 2	☐	Description > The description of the identifier.
subaccount_description	varchar2	Subaccount Description	☐	Description > The description of the identifier.
subaccount_errorInfo_2	varchar2	Sub Account Error Information 2	☐	
subaccount_errorInfo	varchar2	Sub Account Error Message	☐	
subaccount_lastModifiedDateTime_2	datetime	Sub Account Last Modified Date/Time 2	☐	System generated information.
subaccount_lastModifiedDateTime	datetime	Sub Account Last Modified	☐	System generated information.
subaccount_metadata_maxPageSize_2	int64	Sub Account Metadata Max Pagesize 2	☐	

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
subaccount_metadata_maxPageSize	int64	Sub Account Metadata Max Pagesize	☐	
subaccount_metadata_totalCount_2	int64	Sub Account Metadata Total Count 2	☐	
subaccount_metadata_totalCount	int64	Sub Account Metadata Total Count	☐	
subaccount_subaccountId_2	int32	Sub Account ID 2	☐	SubID > The identifier of the subaccount.
subaccount_subaccountId	int32	Sub Account ID	☐	SubID > The identifier of the subaccount.
subaccount_subaccountNumber_2	varchar2	Sub Account Number 2	☐	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
subaccount_subaccountNumber	varchar2	Sub Account Number	☐	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
subaccount_timeStamp_2	blob		☐	The timestamp of the subaccount, used for concurrency control.
subaccount_timeStamp	blob		☐	The timestamp of the subaccount, used for concurrency control.
termEndDate	datetime	Term End Date	☐	The date w hen the process of the deferred revenue recognition should finishfor the selected item; this date can be specified manually if the deferral codeassigned to the item is based on the Flexible by Periods, Prorate by days orFlexible by Days in Period recognition method.This column appears only if theDeferred Revenue Management feature is enabled on the Enable/Disable Features form.
termStartDate	datetime	Term Start Date	☐	The date w hen the process of deferred revenue recognition should start for theselected item; this date can be specified manually if the deferral code assignedto the item is based on the Flexible by Periods, Prorate by days or Flexible byDays in Period recognition method.This column appears only if the DeferredRevenue Management feature is enabled on the Enable/Disable Features screen.
timeStamp	blob	Timestamp	☐	
typeOfWork_description	varchar2		☐	
typeOfWork_rutRotType	varchar2		☐	
typeOfWork_xmlTag	varchar2		☐	
unitPrice	double		☐	Unit price > The unit price set for the item or service. If you

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				w ant to update the unit priceautomatically to the current value(that is, the applicable sales or default price),you can use the Recalculate Prices and Discounts action.If you have modifiedthe unit price and saved the document, the value w ill not be updated by thesystem if you change the document date.
unitPriceInCurrency	double	Unit Price in Currency	☐	Background calculation giving you the Unit price in your default currency. This field is applicable if the amount is given in another currency than your default.
uom	varchar2	Unit of Measure	☐	UoM > The unit of measure (UoM) for the item.
vatCode_description	varchar2	VAT Code Description	☐	Click on the magnifier. > The description.
vatCode_id	varchar2	VAT Code ID	☐	Click on the magnifier. > The identifier.
vatExemptTotal	double	VAT Exempt Total	☐	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax w ith the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	☐	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerCreditNoteLineAttachmentsByCreditNoteNumber: Visma.net Financials Customer Credit Note Line Attachments by Credit Note Number

Get a specific Customer Credit NoteData for Customer Credit Note The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Note Line Attachments by Credit Note Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteLineAttachmentsByCreditNoteNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
creditNoteNumber		☑		Identifies the Customer Credit Note

Columns of Table Function

The columns of the table function CustomerCreditNoteLineAttachmentsByCreditNoteNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active_2	char	Account Active 2	☐	
account_active	char	Account Active	☐	
account_description_2	varchar2	Account Description 2	☐	Name of item/description
account_description	varchar2	Account Description	☐	Name of item/description

CustomerCreditNoteLines: Visma.net Financials Customer Credit Note Lines

Get a range of Customer Credit Notes - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeData for Customer Credit Note

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Note Lines

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteLines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
branch		☐		Filter by Branch
closedFinancialPeriod		☐		The date of the closing of the financial period.

				be updated by thesystem if you change the document date.
unitPriceInCurrency	double	Unit Price in Currency	☐	Background calculation giving you the Unit price in your default currency. This field is applicable if the amount is given in another currency than your default.
uom	varchar2	Unit of Measure	☐	UoM > The unit of measure (UoM) for the item.
vatCode_description	varchar2	VAT Code Description	☐	Click on the magnifier. > The description.
vatCode_id	varchar2	VAT Code ID	☐	Click on the magnifier. > The identifier.
vatExemptTotal	double	VAT Exempt Total	☐	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax w ith the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	☐	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerCreditNoteLinesByCreditNoteNumber: Visma.net Financials Customer Credit Note Lines by Credit Note Number

Get a specific Customer Credit NoteData for Customer Credit Note The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Schema: CustomerCreditNote

Label: Customer Credit Note Lines by Credit Note Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteLinesByCreditNoteNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
creditNoteNumber		☑		Identifies the Customer Credit Note

Columns of Table Function

The columns of the table function CustomerCreditNoteLinesByCreditNoteNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active_2	char	Account Active 2	☐	
account_active	char	Account Active	☐	
account_description_2	varchar2	Account Description 2	☐	Name of item/description
account_description	varchar2	Account Description	☐	Name of item/description
account_externalCode1_2	varchar2	Account External Code 1 2	☐	Account class > The identifier of the account class.
account_externalCode1	varchar2	Account External Code 1	☐	Account class > The identifier of the account class.
account_externalCode2_2	varchar2	Account External Code 2 2	☐	Account class > The name of the account class.
account_externalCode2	varchar2	Account External Code 2	☐	Account class > The name of the account class.
account_number_2	varchar2	Account Number 2	☐	Number of item
account_number	varchar2	Account Number	☐	Number of item

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
account_type_2	varchar2	Account Type 2	☐	Account > The account number.
account_type	varchar2	Account Type	☐	Account > The account number.
amount_2	double		☐	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 w indow .If the check box is cleared, then the value appears w hen the document status is Open.
amount	double	Amount	☐	Amount > The amount after the discount has been applied. The value of this read-only boxis calculated automatically by deducting the discount amount from the extended price.
amountInCurrency_2	double	Amount in Currency 2	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
amountInCurrency	double	Amount in Currency	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	☐	The top part > Balance > For an open customer ledger document, the balance after any cash discount w as taken. For a document used in the application process, this is the balance after the payments w ere applied.
balanceInCurrency	double	Balance in Currency	☐	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name_2	varchar2	Branch Number Name 2	☐	Click the magnifier. > The name.
branchNumber_name	varchar2	Branch Name	☐	Click the magnifier. > The name.
branchNumber_number_2	varchar2	Branch Number 2	☐	Click the magnifier. > The identifier.
branchNumber_number	varchar2	Branch Number	☐	Click the magnifier. > The identifier.
cashAccount	varchar2	Cash Account	☐	Financial details tab > The payment information section > Cash account > The cash account associated w ith the payment method.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
cashDiscount	double	Cash Discount	☐	The top part > Cash discount > The cash discount amount that has been or w ill be taken on the document, w hich the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	☐	The top part > Cash discount date* > The end date of the cash discount period, w hich the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	☐	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
childRecord_name	varchar2		☐	Click the magnifier. > The name.
childRecord_number	varchar2		☐	Click the magnifier. > The identifier.
closedFinancialPeriod	varchar2	Closed Financial Period	☐	Format YYYYMM.
COMPANY_CODE	varchar2(30)	Company Code	☑	Partition code, segmenting the data.
COMPANY_NAME	varchar2(240)	Company Name	☑	Name of the partition.
contact_id	int32	Contact ID	☐	Click the magnifier > The identifier
contact_name	varchar2	Contact Name	☐	Click the magnifier > The displayed name
cost	double	Cost	☐	Cost > The total cost of the line in default currency. The value w ill alw ays be 0 for unreleased documents.
createdDateTime	datetime	Created	☐	The Attachments tab > Creation time > The date the attachment w as created.
creditTerms_description	varchar2	Credit Terms Description	☐	Click on the magnifier. > The description.
creditTerms_id	varchar2	Credit Terms ID	☐	Click on the magnifier. > The identifier.
currencyId	varchar2	Currency ID	☐	The top part > Currency > The currency of the document. By default, it is the customer's default currency,but it can be changed if the Allow Currency Override check box is selected in the AR303000 w indow .
customer_name	varchar2	Customer Name	☐	Click the magnifier. > The name.
customer_number	varchar2	Customer Number	☐	
customerProject	varchar2	Customer Project	☐	The top part > Customer project no. > The customer project no. used in AutoInvoice.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
customerRefNumber	varchar2	Custom Reference Number	☐	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	varchar2	VAT Zone Description	☐	Click on the magnifier. > The description.
customerVatZone_id	varchar2	VAT Zone ID	☐	Click on the magnifier. > The identifier.
deductableAmount	double		☐	
deferralCode	varchar2		☐	The deferral code assigned to the stock item or non-stock item specified in thisdocument line.Upon release of the document, the system generates a deferralschedule (or schedules) based on the settings defined in this deferral code.
deferralSchedule	int32		☐	Original deferral schedule > A read-only column filled in by the system in the Cash return documents created by the reversing process. It shows the identifier of the deferral schedule associated with the original Cash sale document.
description	varchar2	Description	☐	Transaction descr. > Any brief comment relevant to the transaction.The alphanumeric string may contain up to 30 characters.
detailTotal	double	Detail Total	☐	The top part > Detail total > The document total, which the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	☐	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
discountAmount	double		☐	Discount amount > The amount of the line-level discount that has been applied manually orautomatically to this line.The system selects the Manual Discount check boxand calculates the line amount after you have entered the discount amountmanually and save your changes or added a new line.
discountAmountInCurrency	double		☐	Background calculation giving you the Discount amount in your default currency. This field is applicable if the amount is given in another currency than your default.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
discountCode	varchar2	Discount Code	☐	The code of the line discount that has been applied to this line automatically or manually.
discountPercent	double	Discount Percent	☐	Discount percent > The percent of the line-level discount that has been applied manually orautomatically.The system selects the Manual Discount check box andcalculates the discount amount after you have entered the percent manually andsaved your changes or added a new line.
discountTotal	double	Discount Total	☐	The top part > Discount total > The document discount total.
discountTotalInCurrency	double	Discount Total in Currency	☐	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	☐	The top part > Date* > The date w hen the customer ledger document w as created.By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	☐	The top part > Due date* > The date w hen payment for the document is due, in accordance w ith the credit terms.
documentType	varchar2	Document Type	☐	The top part > Type > The document type. The follow ing types are available: invoice, debit note, credit note, overdue charge, credit w rite-off
dontEmail	char	Don't Email	☐	
dontPrint	char	Don't Print	☐	
dunningLetterDate	datetime	Dunning Letter Date	☐	The Financial details tab > The Dunning information section > Dunning letter date > The date of the last released dunning letter in w hich the document w as listed.
dunningLetterLevel	int32	Dunning Letter Level	☐	The Financial details tab > The Dunning information section > Dunning level > The dunning level of the document.
errorInfo	varchar2	Error Message	☐	
exchangeRate	double	Exchange Rate	☐	The top part > Currency > The middle field, click the dow n arrow > Exchange rate - To change the currency rate, click the arrow by the rate to invoke the Rate selection dialog box.
externalLink	varchar2		☐	

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
externalReference	varchar2	External Reference	☐	The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	varchar2	Financial Period	☐	The financial period to w hich the transactions recorded in the document should be posted. Format YYYYMM.
hold	char	Hold	☐	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document w ith the On Hold status may be edited and cannot be released.
inventoryNumber	varchar2	Inventory Number	☐	Item ID > The item ID of the line item, if applicable. Only a non-stock item can be selected.
invoiceAddress_addressId	int32	Invoice Address ID	☐	
invoiceAddress_addressLine1	varchar2	Invoice Address Line 1	☐	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	varchar2	Invoice Address Line 2	☐	Address 2 > The second line of the address.
invoiceAddress_addressLine3	varchar2	Invoice Address Line 3	☐	Address 3 > The third line of the address.
invoiceAddress_city	varchar2	Invoice Address City	☐	City > The city.
invoiceAddress_country_errorInfo	varchar2	Invoice Address Country Error Information	☐	
invoiceAddress_country_id	varchar2	Invoice Address Country ID	☐	Mandatory field: Country ID* > The unique tw o-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		☐	
invoiceAddress_country_metadata_totalCount	int64		☐	
invoiceAddress_country_name	varchar2	Invoice Address Country Name	☐	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	varchar2	Invoice Address County ID	☐	Click the magnifier > The identifier
invoiceAddress_county_name	varchar2	Invoice Address County Name	☐	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	char		☐	Override address > A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	varchar2	Invoice Address Postal Code	☐	Postcode > The postcode.
invoiceContact_attention	varchar2	Invoice Contact Attention	☐	
invoiceContact_businessName	varchar2		☐

CustomerCreditNoteLineSubaccountSegments: Visma.net Financials Customer Credit Note Line Subaccount Segments

Get a range of Customer Credit Notes - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeData for Customer Credit Note

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Note Line Subaccount Segments

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteLineSubaccountSegments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
branch		☐		Filter by Branch
closedFinancialPeriod		☐		The date of the closing of the financial period.
createdDateTime		☐		This value, generated by the system, indicates the creation date and time. Use it to retrieve all records that have been created since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
createdDateTimeCondition		☐		This value represents the condition to be applied w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than*

Name	Data Type	Label	Required	Documentation
				if the amount is given in another currency than your default.
uom	varchar2	Unit of Measure	☐	UoM > The unit of measure (UoM) for the item.
vatCode_description	varchar2	VAT Code Description	☐	Click on the magnifier. > The description.
vatCode_id	varchar2	VAT Code ID	☐	Click on the magnifier. > The identifier.
vatExemptTotal	double	VAT Exempt Total	☐	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax w ith the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	☐	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerCreditNoteLineSubaccountSegmentsByCreditNoteNumber: Visma.net Financials Customer Credit Note Line Subaccount Segments by Credit Note Number

Get a specific Customer Credit NoteData for Customer Credit Note The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Note Line Subaccount Segments by Credit Note Number

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteLineSubaccountSegmentsByCreditNoteNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
creditNoteNumber		☑		Identifies the Customer Credit Note

Columns of Table Function

The columns of the table function CustomerCreditNoteLineSubaccountSegmentsByCreditNoteNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active_2	char	Account Active 2	☐	
account_active	char	Account Active	☐	
account_description_2	varchar2	Account Description 2	☐	Name of item/description
account_description	varchar2	Account Description	☐	Name of item/description
account_externalCode1_2	varchar2	Account External Code 1 2	☐	Account class > The identifier of the account class.
account_externalCode1	varchar2	Account External Code 1	☐	Account class > The identifier of the account class.
account_externalCode2_2	varchar2	Account External Code 2 2	☐	Account class > The name of the account class.
account_externalCode2	varchar2	Account External Code 2	☐	Account class > The name of the account class.
account_number_2	varchar2	Account Number 2	☐	Number of item
account_number	varchar2	Account Number	☐	Number of item
account_type_2	varchar2	Account Type 2	☐	Account > The account number.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
account_type	varchar2	Account Type	☐	Account > The account number.
active	char	Active	☐	Active > The status of the identifier.
amount_2	double		☐	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 w indow .If the check box is cleared, then the value appears w hen the document status is Open.
amount	double	Amount	☐	Amount > The amount after the discount has been applied. The value of this read-only boxis calculated automatically by deducting the discount amount from the extended price.
amountInCurrency_2	double	Amount in Currency 2	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
amountInCurrency	double	Amount in Currency	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	☐	The top part > Balance > For an open customer ledger document, the balance after any cash discount w as taken. For a document used in the application process, this is the balance after the payments w ere applied.
balanceInCurrency	double	Balance in Currency	☐	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name_2	varchar2	Branch Number Name 2	☐	Click the magnifier. > The name.
branchNumber_name	varchar2	Branch Name	☐	Click the magnifier. > The name.
branchNumber_number_2	varchar2	Branch Number 2	☐	Click the magnifier. > The identifier.
branchNumber_number	varchar2	Branch Number	☐	Click the magnifier. > The identifier.
cashAccount	varchar2	Cash Account	☐	Financial details tab > The payment information section > Cash account > The cash account associated w ith the payment method.

Name	Data Type	Label	Required	Documentation
cashDiscount	double	Cash Discount	☐	The top part > Cash discount > The cash discount amount that has been or w ill be taken on the document, w hich the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	☐	The top part > Cash discount date* > The end date of the cash discount period, w hich the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	☐	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
childRecord_name	varchar2		☐	Click the magnifier. > The name.
childRecord_number	varchar2		☐	Click the magnifier. > The identifier.
closedFinancialPeriod	varchar2	Closed Financial Period	☐	Format YYYYMM.
COMPANY_CODE	varchar2(30)	Company Code	☑	Partition code, segmenting the data.
COMPANY_NAME	varchar2(240)	Company Name	☑	Name of the partition.
contact_id	int32	Contact ID	☐	Click the magnifier > The identifier
contact_name	varchar2	Contact Name	☐	Click the magnifier > The displayed name
cost	double	Cost	☐	Cost > The total cost of the line in default currency. The value w ill alw ays be 0 for unreleased documents.
createdDateTime	datetime	Created	☐	The Attachments tab > Creation time > The date the attachment w as created.
creditTerms_description	varchar2	Credit Terms Description	☐	Click on the magnifier. > The description.
creditTerms_id	varchar2	Credit Terms ID	☐	Click on the magnifier. > The identifier.
currencyId	varchar2	Currency ID	☐	The top part > Currency > The currency of the document. By default, it is the customer's default currency,but it can be changed if the Allow Currency Override check box is selected in the AR303000 w indow .
customer_name	varchar2	Customer Name	☐	Click the magnifier. > The name.
customer_number	varchar2	Customer Number	☐	
customerProject	varchar2	Customer Project	☐	The top part > Customer project no. > The customer project no. used in AutoInvoice.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
customerRefNumber	varchar2	Custom Reference Number	☐	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	varchar2	VAT Zone Description	☐	Click on the magnifier. > The description.
customerVatZone_id	varchar2	VAT Zone ID	☐	Click on the magnifier. > The identifier.
deductableAmount	double		☐	
deferralCode	varchar2		☐	The deferral code assigned to the stock item or non-stock item specified in thisdocument line.Upon release of the document, the system generates a deferralschedule (or schedules) based on the settings defined in this deferral code.
deferralSchedule	int32		☐	Original deferral schedule > A read-only column filled in by the system in the Cash return documents created by the reversing process. It show s the identifier of the deferral schedule associated w ith the original Cash sale document.
description_2	varchar2	Description 2	☐	Transaction descr. > Any brief comment relevant to the transaction.The alphanumeric string may contain up to 30 characters.
description	varchar2	Description	☐	Description > The description of the identifier.
detailTotal	double	Detail Total	☐	The top part > Detail total > The document total, w hich the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	☐	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
discountAmount	double		☐	Discount amount > The amount of the line-level discount that has been applied manually orautomatically to this line.The system selects the Manual Discount check boxand calculates the line amount after you have entered the discount amountmanually and save your changes or added a new line.
discountAmountInCurrency	double		☐	Background calculation giving you the Discount amount in your default currency. This field is applicable if the amount is given

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				in another currency than your default.
discountCode	varchar2	Discount Code	☐	The code of the line discount that has been applied to this line automatically or manually.
discountPercent	double	Discount Percent	☐	Discount percent > The percent of the line-level discount that has been applied manually orautomatically.The system selects the Manual Discount check box andcalculates the discount amount after you have entered the percent manually andsaved your changes or added a new line.
discountTotal	double	Discount Total	☐	The top part > Discount total > The document discount total.
discountTotalInCurrency	double	Discount Total in Currency	☐	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	☐	The top part > Date* > The date when the customer ledger document was created.By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	☐	The top part > Due date* > The date when payment for the document is due, in accordance with the credit terms.
documentType	varchar2	Document Type	☐	The top part > Type > The document type. The following types are available: invoice, debit note, credit note, overdue charge, credit write-off
dontEmail	char	Don't Email	☐	
dontPrint	char	Don't Print	☐	
dunningLetterDate	datetime	Dunning Letter Date	☐	The Financial details tab > The Dunning information section > Dunning letter date > The date of the last released dunning letter in which the document was listed.
dunningLetterLevel	int32	Dunning Letter Level	☐	The Financial details tab > The Dunning information section > Dunning level > The dunning level of the document.
errorInfo_2	varchar2	Error Information 2	☐	
errorInfo	varchar2	Error Message	☐	
exchangeRate	double	Exchange Rate	☐	The top part > Currency > The middle field, click the down arrow > Exchange rate - To change the currency rate, click

Name	Data Type	Label	Required	Documentation
				the arrow by the rate to invoke the Rate selection dialog box.
externalLink	varchar2		☐	
externalReference	varchar2	External Reference	☐	The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	varchar2	Financial Period	☐	The financial period to w hich the transactions recorded in the document should be posted. Format YYYYMM.
hold	char	Hold	☐	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document w ith the On Hold status may be edited and cannot be released.
inventoryNumber	varchar2	Inventory Number	☐	Item ID > The item ID of the line item, if applicable. Only a non-stock item can be selected.
invoiceAddress_addressId	int32	Invoice Address ID	☐	
invoiceAddress_addressLine1	varchar2	Invoice Address Line 1	☐	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	varchar2	Invoice Address Line 2	☐	Address 2 > The second line of the address.
invoiceAddress_addressLine3	varchar2	Invoice Address Line 3	☐	Address 3 > The third line of the address.
invoiceAddress_city	varchar2	Invoice Address City	☐	City > The city.
invoiceAddress_country_errorInfo	varchar2	Invoice Address Country Error Information	☐	
invoiceAddress_country_id	varchar2	Invoice Address Country ID	☐	Mandatory field: Country ID* > The unique tw o-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		☐	
invoiceAddress_country_metadata_totalCount	int64		☐	
invoiceAddress_country_name	varchar2	Invoice Address Country Name	☐	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	varchar2	Invoice Address County ID	☐	Click the magnifier > The identifier
invoiceAddress_county_name	varchar2	Invoice Address County Name	☐	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	char		☐	Override address > A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	varchar2	Invoice Address Postal Code	☐	Postcode > The postcode.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
invoiceContact_attention	varchar2	Invoice Contact Attention	☐	
invoiceContact_businessName	varchar2		☐	
invoiceContact_contactId	int32	Invoice Contact ID	☐	
invoiceContact_email	varchar2	Invoice Contact Email Address	☐	
invoiceContact_overrideContact	char		☐	
invoiceContact_phone1	varchar2	Invoice Contact Phone 1	☐	
invoiceText	varchar2	Invoice Text	☐	The top part > Invoice text > Any user-provided description of the customer ledger document.
isRotRutDeductible_2	char	Is ROTRUT Deductible 2	☐	The top part > Domestic services deductible document > A check box indicating if the document is Rot/rut deductible (applicable for the Swedish markets)
isRotRutDeductible	char		☐	
itemType	varchar2	Item Type	☐	
lastModifiedDateTime_2	datetime	Last Modified Date/Time 2	☐	System generated field for last modification date/time of document.
lastModifiedDateTime	datetime	Last Modified	☐	System generated information.
lineNumber	int32	Line Number	☐	Line no. > A counter of lines in the overview of cash sales document overview .
location_countryId	varchar2	Location Country ID	☐	Location*.
location_id	varchar2	Location ID	☐	Click the magnifier > The identifier
location_name	varchar2	Location Name	☐	Click the magnifier > The displayed name
manualAmount	double	Manual Amount	☐	Manual amount > a check box indicating that the amount has been entered manually.
manualAmountInCurrency	double		☐	Background calculation giving you the Manual amount in your default currency. This field is applicable if the amount is given in another currency than your default.
manualDiscount	char	Manual Discount	☐	Manual discount > A check box that indicates (if selected) that the discount has been appliedmanually.If you clear the check box, the system clears entered discount percent,or discount amount, or selected discount code.
metadata_maxPageSize_2	int64		☐	
metadata_maxPageSize	int64	Metadata Max Pagesize	☐	

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
metadata_totalCount_2	int64		☐	
metadata_totalCount	int64	Total Count	☐	
note_2	varchar2	Note 2	☐	Icon Notes on top of the w indow > Pop-up w indow for providing any user-defined text connected to the document.
note	varchar2	Note	☐	Table > Icon Notes > Pop-up w indow for providing any user-defined text connected to the order.
origInvoiceDate	datetime	Original Invoice Date	☐	The top part > Orig invoice date > The date based on w hich the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences.By default, for a new document, it is the current business date, but you can change the date.
paymentMethod_description	varchar2	Payment Method Description	☐	Click on the magnifier. > The description.
paymentMethod_id	varchar2	Payment Method ID	☐	Click on the magnifier. > The identifier.
paymentReference	varchar2	Payment Reference	☐	///The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance w ith the number series assigned to cash sales in the Customer ledger preferences w indow ..
postPeriod	varchar2	Post Period	☐	The top part > Post period > The period to w hich the document should be posted. Format YYYYMM.
project_description	varchar2	Project Description	☐	Click on the magnifier. > The description.
project_id	varchar2	Project ID	☐	Click on the magnifier. > The identifier.
project_internalId	int32		☐	The internal identifier.
projectTask_description	varchar2	Project Task Description	☐	Click on the magnifier. > The description.
projectTask_id	varchar2	Project Task ID	☐	Click on the magnifier. > The identifier.
projectTask_internalId	int32		☐	The internal identifier.
quantity	double	Quantity	☐	Quantity > The quantity of items (goods or services) of a particular type sold to the customer.
referenceNumber	varchar2	Reference Number	☐	The Top part > Ref. no. > The reference number of the customer ledger document in the system.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
dunningLetterDate	datetime	Dunning Letter Date	☐	The Financial details tab > The Dunning information section > Dunning letter date > The date of the last released dunning letter in w hich the document w as listed.
dunningLetterLevel	int32	Dunning Letter Level	☐	The Financial details tab > The Dunning information section > Dunning level > The dunning level of the document.
errorInfo	varchar2	Error Message	☐	
exchangeRate	double	Exchange Rate	☐	The top part > Currency > The middle field, click the dow n arrow > Exchange rate - To change the currency rate, click the arrow by the rate to invoke the Rate selection dialog box.
externalReference	varchar2	External Reference	☐	The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	varchar2	Financial Period	☐	The financial period to w hich the transactions recorded in the document should be posted. Format YYYYMM.
hold	char	Hold	☐	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document w ith the On Hold status may be edited and cannot be released.
invoiceAddress_addressId	int32	Invoice Address ID	☐	
invoiceAddress_addressLine1	varchar2	Invoice Address Line 1	☐	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	varchar2	Invoice Address Line 2	☐	Address 2 > The second line of the address.
invoiceAddress_addressLine3	varchar2	Invoice Address Line 3	☐	Address 3 > The third line of the address.
invoiceAddress_city	varchar2	Invoice Address City	☐	City > The city.
invoiceAddress_country_errorInfo	varchar2	Invoice Address Country Error Information	☐	
invoiceAddress_country_id	varchar2	Invoice Address Country ID	☐	Mandatory field: Country ID* > The unique tw o-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		☐	
invoiceAddress_country_metadata_totalCount	int64		☐	
invoiceAddress_country_name	varchar2	Invoice Address Country Name	☐	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	varchar2	Invoice Address County ID	☐	Click the magnifier > The identifier

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
invoiceAddress_county_name	varchar2	Invoice Address County Name	☐	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	char		☐	Override address > A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	varchar2	Invoice Address Postal Code	☐	Postcode > The postcode.
invoiceContact_attention	varchar2	Invoice Contact Attention	☐	
invoiceContact_businessName	varchar2		☐	
invoiceContact_contactId	int32	Invoice Contact ID	☐	
invoiceContact_email	varchar2	Invoice Contact Email Address	☐	
invoiceContact_overrideContact	char		☐	
invoiceContact_phone1	varchar2	Invoice Contact Phone 1	☐	
invoiceText	varchar2	Invoice Text	☐	The top part > Invoice text > Any user-provided description of the customer ledger document.
isRotRutDeductible	char		☐	The top part > Domestic services deductible document > A check box indicating if the document is Rot/rut deductible (applicable for the Swedish markets)
lastModifiedDateTime	datetime	Last Modified	☐	System generated field for last modification date/time of document.
location_countryId	varchar2	Location Country ID	☐	Location*.
location_id	varchar2	Location ID	☐	Click the magnifier > The identifier
location_name	varchar2	Location Name	☐	Click the magnifier > The displayed name
metadata_maxPageSize	int64	Metadata Max Pagesize	☐	
metadata_totalCount	int64	Total Count	☐	
note	varchar2	Note	☐	Icon Notes on top of the window > Pop-up window for providing any user-defined text connected to the document.
origInvoiceDate	datetime	Original Invoice Date	☐	The top part > Orig invoice date > The date based on which the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences.By default, for a new document, it is the current business date, but you can change the date.

CustomerCreditNoteSubaccountSegments: Visma.net Financials Customer Credit Note Subaccount Segments

Get a range of Customer Credit Notes - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeData for Customer Credit Note

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Note Subaccount Segments

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteSubaccountSegments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
branch		☐		Filter by Branch

Columns of Table Function

The columns of the table function CustomerCreditNoteTaxDetails are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active	char	Account Active	☐	
account_description	varchar2	Account Description	☐	Name of item/description
account_externalCode1	varchar2	Account External Code 1	☐	Account class > The identifier of the account class.
account_externalCode2	varchar2	Account External Code 2	☐	Account class > The name of the account class.
account_number	varchar2	Account Number	☐	Number of item
account_type	varchar2	Account Type	☐	Account > The account number.
amount	double	Amount	☐	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 w indow .If the check box is cleared, then the value appears w hen the document status is Open.
amountInCurrency	double	Amount in Currency	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
balance	double	Balance	☐	The top part > Balance > For an open customer ledger document, the balance after any cash discount w as taken. For a document used in the application process, this is the balance after the payments w ere applied.
balanceInCurrency	double	Balance in Currency	☐	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name	varchar2	Branch Name	☐	Click the magnifier. > The name.
branchNumber_number	varchar2	Branch Number	☐	Click the magnifier. > The identifier.
cashAccount	varchar2	Cash Account	☐	Financial details tab > The payment information section > Cash account > The cash account associated w ith the payment method.
cashDiscount	double	Cash Discount	☐	The top part > Cash discount > The cash discount amount that has been or w ill be taken on

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				the document, w hich the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	☐	The top part > Cash discount date* > The end date of the cash discount period, w hich the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	☐	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
childRecord_name	varchar2		☐	Click the magnifier. > The name.
childRecord_number	varchar2		☐	Click the magnifier. > The identifier.
closedFinancialPeriod	varchar2	Closed Financial Period	☐	Format YYYYMM.
COMPANY_CODE	varchar2(30)	Company Code	☑	Partition code, segmenting the data.
COMPANY_NAME	varchar2(240)	Company Name	☑	Name of the partition.
contact_id	int32	Contact ID	☐	Click the magnifier > The identifier
contact_name	varchar2	Contact Name	☐	Click the magnifier > The displayed name
createdDateTime	datetime	Created	☐	The Attachments tab > Creation time > The date the attachment w as created.
creditTerms_description	varchar2	Credit Terms Description	☐	Click on the magnifier. > The description.
creditTerms_id	varchar2	Credit Terms ID	☐	Click on the magnifier. > The identifier.
currencyId	varchar2	Currency ID	☐	The top part > Currency > The currency of the document. By default, it is the customer's default currency,but it can be changed if the Allow Currency Override check box is selected in the AR303000 w indow .
customer_name	varchar2	Customer Name	☐	Click the magnifier. > The name.
customer_number	varchar2	Customer Number	☐	
customerProject	varchar2	Customer Project	☐	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	varchar2	Custom Reference Number	☐	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	varchar2	VAT Zone Description	☐	Click on the magnifier. > The description.

invoiceContact_phone1	varchar2	Invoice Contact Phone 1	☐	
invoiceText	varchar2	Invoice Text	☐	The top part > Invoice text > Any user-provided description of the customer ledger document.
isRotRutDeductible	char		☐	The top part > Domestic services deductible document > A check box indicating if the document is Rot/rut deductible (applicable for the Swedish markets)
lastModifiedDateTime	datetime	Last Modified	☐	System generated field for last modification date/time of document.
location_countryId	varchar2	Location Country ID	☐	Location*.
location_id	varchar2	Location ID	☐	Click the magnifier > The identifier
location_name	varchar2	Location Name	☐	Click the magnifier > The displayed name
metadata_maxPageSize	int64	Metadata Max Pagesize	☐	
metadata_totalCount	int64	Total Count	☐	
note	varchar2	Note	☐	Icon Notes on top of the window > Pop-up window for providing any user-defined text connected to the document.
origInvoiceDate	datetime	Original Invoice Date	☐	The top part > Orig invoice date > The date based on which the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences.By default, for a new document, it is the current business date, but you can change the date.
paymentMethod_description	varchar2	Payment Method Description	☐	Click on the magnifier. > The description.
paymentMethod_id	varchar2	Payment Method ID	☐	Click on the magnifier. > The identifier.
paymentReference	varchar2	Payment Reference	☐	///The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
postPeriod	varchar2	Post Period	☐	The top part > Post period > The period to which the document should be posted. Format YYYYMM.
project_description	varchar2	Project Description	☐	Click on the magnifier. > The description.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
project_id	varchar2	Project ID	☐	Click on the magnifier. > The identifier.
project_internalId	int32		☐	The internal identifier.
recordId	int32	Record ID	☐	The id as stored in the database. It can be used when we want to update a VAT record.
referenceNumber	varchar2	Reference Number	☐	The Top part > Ref. no. > The reference number of the customer ledger document in the system.
revoked	char	Revoke	☐	
roundingDiff	double	Rounding Difference	☐	The top part > Rounding diff. > The difference between the original amount and the rounded amount.
salesPerson_description	varchar2	Sales Person Description	☐	Click on the magnifier. > The description.
salesPerson_id	varchar2	Sales Person ID	☐	Click on the magnifier. > The identifier.
salesPersonDescr	varchar2	Sales Person Name	☐	The field is deprecated for customer document endpoints, please use SalesPerson instead
salesPersonID	int32	Sales Person ID	☐	The field is deprecated for customer document endpoints, please use SalesPerson instead
sendToAutoInvoice	char	Send to Auto-invoice	☐	The Attachment tab > Send the file to AutoInvoice > The selected files will be attached to the invoice.
status	varchar2	Status	☐	The top part > Status > The status of the document, which can be one of the following: Hold, Balanced, Voided, Scheduled, Open, Closed, Pending print, Pending email.
subaccount_active	char	Sub Account Active 2	☐	Active > The status of the identifier.
subaccount_description	varchar2	Subaccount Description	☐	Description > The description of the identifier.
subaccount_errorInfo	varchar2	Sub Account Error Message	☐	
subaccount_lastModifiedDateTime	datetime	Sub Account Last Modified	☐	System generated information.
subaccount_metadata_maxPageSize	int64	Sub Account Metadata Max Pagesize	☐	
subaccount_metadata_totalCount	int64	Sub Account Metadata Total Count	☐	
subaccount_subaccountId	int32	Sub Account ID	☐	SubID > The identifier of the subaccount.
subaccount_subaccountNumber	varchar2	Sub Account Number	☐	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
subaccount_timeStamp	blob		☐	The timestamp of the subaccount, used for concurrency control.
taxableAmount	double	Taxable Amount	☐	Taxable amount > The taxable amount for the VAT, w hich is calculated at the document level.
taxId	varchar2	Tax ID	☐	Mandatory field: VAT ID* > The ID of the VAT applied to the document.
timeStamp	blob	Timestamp	☐	
vatAmount	double	VAT Amount	☐	VAT > The VAT amount for the specific VAT, w hich is calculated at the document level.
vatExemptTotal	double	VAT Exempt Total	☐	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax w ith the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	☐	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatId_description	varchar2		☐	Name of item/description
vatId_number	varchar2		☐	Number of item
vatRate	double	VAT Rate	☐	VAT rate > The rate of the VAT.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerCreditNoteTaxDetailsByCreditNoteNumber: Visma.net Financials Customer Credit Note Tax Details by Credit Note Number

Get a specific Customer Credit NoteData for Customer Credit Note The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerCreditNote

Label: Customer Credit Note Tax Details by Credit Note Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditNoteTaxDetailsByCreditNoteNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
creditNoteNumber		☑		Identifies the Customer Credit Note

Columns of Table Function

The columns of the table function CustomerCreditNoteTaxDetailsByCreditNoteNumber are shown below. Each column has an SQL data type.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditWriteOffByCreditWriteOffNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

dunningLetterDateTimeCondition		☐		Set time/date as before (<), after (>), before and including (=<) OR after and including (=>) to filter on time frame.
dunningLevel		☐		The dunning level of the document.
expandApplications		☐		True if you w ant to see all dunning information regarding this document.
expandAttachments		☐		True if you w ant to see all attachments regarding this document.
expandDunningInformation		☐		
expandInvoiceAddress		☐		True if you w ant to see all information regarding the invoice address for this document.
expandTaxDetails		☐		True if you w ant to see all VAT details regarding this document.
externalReference		☐		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod		☐		The financial period to w hich the transactions recorded in the document is posted. Format YYYYMM.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Required	Default Value	Documentation
greaterThanValue		☐		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime		☐		This value, generated by the system, indicates the last time the record was modified. Use it to retrieve all records that have been modified since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __LastModifiedDateTime__ and __LastModifiedDateTimeCondition__ are __mutually inclusive__.
lastModifiedDateTimeCondition		☐		This value represents the condition to be applied when retrieving records.Accepted values (without the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __LastModifiedDateTime__ and __LastModifiedDateTimeCondition__ are __mutually inclusive__.
paymentReference		☐		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
project		☐		The project with which the document is associated.
released		☐		Parameter for showing if invoice has been released or not.
status		☐		The status of the document. Use the dropdown to select status. (Values: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerCreditWriteOffSubAccountSegments are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active	char	Account Active	☐	
account_description	varchar2	Account Description	☐	Name of item/description

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
account_externalCode1	varchar2	Account External Code 1	☐	Account class > The identifier of the account class.
account_externalCode2	varchar2	Account External Code 2	☐	Account class > The name of the account class.
account_number	varchar2	Account Number	☐	Number of item
account_type	varchar2	Account Type	☐	Account > The account number.
active	char	Active	☐	Active > The status of the identifier.
amount	double	Amount	☐	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 w indow .If the check box is cleared, then the value appears w hen the document status is Open.
amountInCurrency	double	Amount in Currency	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
balance	double	Balance	☐	The top part > Balance > For an open customer ledger document, the balance after any cash discount w as taken. For a document used in the application process, this is the balance after the payments w ere applied.
balanceInCurrency	double	Balance in Currency	☐	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name	varchar2	Branch Name	☐	Click the magnifier. > The name.
branchNumber_number	varchar2	Branch Number	☐	Click the magnifier. > The identifier.
cashAccount	varchar2	Cash Account	☐	Financial details tab > The payment information section > Cash account > The cash account associated w ith the payment method.
cashDiscount	double	Cash Discount	☐	The top part > Cash discount > The cash discount amount that has been or w ill be taken on the document, w hich the system calculates based on the specified credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	☐	Background calculation giving you the Cash discount in your default currency. This field is

Name	Data Type	Label	Required	Documentation
				original amount and the rounded amount.
segmentDescription	varchar2		☐	The Segment values w indow > The Top part > The description of the segment.
segmentId	int32	Segment ID	☐	The Segment values w indow > The Top part > The ID of the segment.
segmentValue	varchar2	Segment Value	☐	The Segment values w indow > The table > The value of the segment, alphanumeric.
segmentValueDescription	varchar2	Segment Value Description	☐	The Segment values w indow > The table > The description of the segment value.
status	varchar2	Status	☐	The top part > Status > The status of the document, w hich can be one of the follow ing: Hold, Balanced, Voided, Scheduled, Open, Closed, Pending print, Pending email.
subaccountId	int32		☐	SubID > The identifier of the subaccount.
subaccountNumber	varchar2		☐	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
timeStamp_2	blob		☐	Identifier that represents a specific version of the resource.It helps to prevent simultaneous updates of the resource from overw riting each other (by using ETags and If-Match headers)
timeStamp	blob	Timestamp	☐	The timestamp of the subaccount, used for concurrency control.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerCreditWriteOffSubAccountSegmentsByCreditWriteOffNumber: Visma.net Financials Customer Credit Write-off Sub Account Segments by Credit Write-off Number

Get a specific Customer Credit WriteOffData for Customer Credit WriteOff The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerCreditWriteOff

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Label: Customer Credit Write-off Sub Account Segments by Credit Write-off Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerCreditWriteOffSubAccountSegmentsByCreditWriteOffNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
creditWriteOffNumber		☑		Identifies the Customer Credit WriteOff

documentDueDate		☐		The date w hen payment for the document is due, in accordance w ith the credit terms.
documentDueDateCondition		☐		This value represents the condition to be applied to the Due Date w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal
documentType		☐		The field is deprecated for specific customer document endpoints. It w ill only be usable from customer document endpoint. (Values: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime		☐		The date and time for w hen the document last released a dunning letter.
dunningLetterDateTimeCondition		☐		Set time/date as before (<), after (>), before and including (=<) OR after and including (=>) to filter on time frame.
dunningLevel		☐		The dunning level of the document.
expandApplications		☐		True if you w ant to see all dunning information regarding this document.
expandAttachments		☐		True if you w ant to see all attachments regarding this document.
expandDunningInformation		☐		
expandInvoiceAddress		☐		True if you w ant to see all information regarding the invoice address for this document.
expandTaxDetails		☐		True if you w ant to see all VAT details regarding this document.
externalReference		☐		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod		☐		The financial period to w hich the transactions recorded in the

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Required	Default Value	Documentation
				document is posted. Format YYYYMM.
greaterThanValue		☐		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime		☐		This value, generated by the system, indicates the last time the record was modified. Use it to retrieve all records that have been modified since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __LastModifiedDateTime__ and __LastModifiedDateTimeCondition__ are __mutually inclusive__.
lastModifiedDateTimeCondition		☐		This value represents the condition to be applied when retrieving records.Accepted values (without the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __LastModifiedDateTime__ and __LastModifiedDateTimeCondition__ are __mutually inclusive__.
paymentReference		☐		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
project		☐		The project with which the document is associated.
released		☐		Parameter for showing if invoice has been released or not.
status		☐		The status of the document. Use the dropdown to select status. (Values: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerDebitNoteAttachments are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active	char	Account Active	☐

				Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	☐	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerDebitNoteAttachmentsByNumber: Visma.net Financials Customer Debit Note Attachments by Number

Get a specific Customer Debit NoteData for Customer Debit Note The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerDebitNote

Label: Customer Debit Note Attachments by Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDebitNoteAttachmentsByNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
debitNoteNumber		☑		Identifies the Customer Debit Note

Columns of Table Function

The columns of the table function CustomerDebitNoteAttachmentsByNumber are shown below. Each column has an SQL data type.

CustomerDebitNoteByNumber: Visma.net Financials Customer Debit Note by Number

Get a specific Customer Debit NoteData for Customer Debit Note The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Schema: CustomerDebitNote

Label: Customer Debit Note by Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDebitNoteByNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Label	Required	Documentation
unitPriceInCurrency	double	Unit Price in Currency	☐	Background calculation giving you the Unit price in your default currency. This field is applicable if the amount is given in another currency than your default.
uom	varchar2	Unit of Measure	☐	UoM > The unit of measure (UoM) for the item.
vatCode_description	varchar2	VAT Code Description	☐	Click on the magnifier. > The description.
vatCode_id	varchar2	VAT Code ID	☐	Click on the magnifier. > The identifier.
vatExemptTotal	double	VAT Exempt Total	☐	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax w ith the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	☐	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerDebitNoteLineAttachmentsByNumber: Visma.net Financials Customer Debit Note Line Attachments by Number

Get a specific Customer Debit NoteData for Customer Debit Note The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerDebitNote

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Label: Customer Debit Note Line Attachments by Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDebitNoteLineAttachmentsByNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
debitNoteNumber		☑		Identifies the Customer Debit Note

Columns of Table Function

The columns of the table function CustomerDebitNoteLineAttachmentsByNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active_2	char	Account Active 2	☐	
account_active	char	Account Active	☐	
account_description_2	varchar2	Account Description 2	☐	Name of item/description
account_description	varchar2	Account Description	☐	Name of item/description
account_externalCode1_2	varchar2	Account External Code 1 2	☐	Account class > The identifier of the account class.
account_externalCode1	varchar2	Account External Code 1	☐	Account class > The identifier of the account class.
account_externalCode2_2	varchar2	Account External Code 2 2	☐	Account class > The name of the account class.
account_externalCode2	varchar2	Account External Code 2	☐	Account class > The name of the account class.
account_number_2	varchar2	Account Number 2	☐	Number of item
account_number	varchar2	Account Number	☐	Number of item
account_type_2	varchar2	Account Type 2	☐	Account > The account number.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
account_type	varchar2	Account Type	☐	Account > The account number.
amount_2	double		☐	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 w indow .If the check box is cleared, then the value appears w hen the document status is Open.
amount	double	Amount	☐	Amount > The amount after the discount has been applied. The value of this read-only boxis calculated automatically by deducting the discount amount from the extended price.
amountInCurrency_2	double	Amount in Currency 2	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
amountInCurrency	double	Amount in Currency	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	☐	The top part > Balance > For an open customer ledger document, the balance after any cash discount w as taken. For a document used in the application process, this is the balance after the payments w ere applied.
balanceInCurrency	double	Balance in Currency	☐	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name_2	varchar2	Branch Number Name 2	☐	Click the magnifier. > The name.
branchNumber_name	varchar2	Branch Name	☐	Click the magnifier. > The name.
branchNumber_number_2	varchar2	Branch Number 2	☐	Click the magnifier. > The identifier.
branchNumber_number	varchar2	Branch Number	☐	Click the magnifier. > The identifier.
cashAccount	varchar2	Cash Account	☐	Financial details tab > The payment information section > Cash account > The cash account associated w ith the payment method.
cashDiscount	double	Cash Discount	☐	The top part > Cash discount > The cash discount amount

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				that has been or will be taken on the document, which the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	☐	Mandatory field: The Top part > Cash discount date* > The end date of the cash discount period, which the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	☐	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
childRecord_name	varchar2		☐	Click the magnifier. > The name.
childRecord_number	varchar2		☐	Click the magnifier. > The identifier.
closedFinancialPeriod	varchar2	Closed Financial Period	☐	Format YYYYMM.
COMPANY_CODE	varchar2(30)	Company Code	☑	Partition code, segmenting the data.
COMPANY_NAME	varchar2(240)	Company Name	☑	Name of the partition.
contact_id	int32	Contact ID	☐	Click the magnifier > The identifier
contact_name	varchar2	Contact Name	☐	Click the magnifier > The displayed name
cost	double	Cost	☐	Cost > The total cost of the line in default currency. The value will always be 0 for unreleased documents.
createdDateTime	datetime	Created	☐	The Attachments tab > Creation time > The date the attachment was created.
creditTerms_description	varchar2	Credit Terms Description	☐	Click on the magnifier. > The description.
creditTerms_id	varchar2	Credit Terms ID	☐	Click on the magnifier. > The identifier.
currencyId	varchar2	Currency ID	☐	The top part > Currency > The currency of the document. By default, it is the customer's default currency,but it can be changed if the Allow Currency Override check box is selected in the AR303000 window.
customer_name	varchar2	Customer Name	☐	Click the magnifier. > The name.
customer_number	varchar2	Customer Number	☐	
customerProject	varchar2	Customer Project	☐	The top part > Customer project no. > The customer project no. used in AutoInvoice.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
customerRefNumber	varchar2	Custom Reference Number	☐	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	varchar2	VAT Zone Description	☐	Click on the magnifier. > The description.
customerVatZone_id	varchar2	VAT Zone ID	☐	Click on the magnifier. > The identifier.
deductableAmount	double		☐	
deferralCode	varchar2		☐	The deferral code assigned to the stock item or non-stock item specified in thisdocument line.Upon release of the document, the system generates a deferralschedule (or schedules) based on the settings defined in this deferral code.
deferralSchedule	int32		☐	Original deferral schedule > A read-only column filled in by the system in the Cash return documents created by the reversing process. It shows the identifier of the deferral schedule associated with the original Cash sale document.
description	varchar2	Description	☐	Transaction descr. > Any brief comment relevant to the transaction.The alphanumeric string may contain up to 30 characters.
detailTotal	double	Detail Total	☐	The top part > Detail total > The document total, which the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	☐	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
discountAmount	double		☐	Discount amount > The amount of the line-level discount that has been applied manually orautomatically to this line.The system selects the Manual Discount check boxand calculates the line amount after you have entered the discount amountmanually and save your changes or added a new line.
discountAmountInCurrency	double		☐	Background calculation giving you the Discount amount in your default currency. This field is applicable if the amount is given in another currency than your default.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
discountCode	varchar2	Discount Code	☐	The code of the line discount that has been applied to this line automatically or manually.
discountPercent	double	Discount Percent	☐	Discount percent > The percent of the line-level discount that has been applied manually orautomatically.The system selects the Manual Discount check box andcalculates the discount amount after you have entered the percent manually andsaved your changes or added a new line.
discountTotal	double	Discount Total	☐	The top part > Discount total > The document discount total.
discountTotalInCurrency	double	Discount Total in Currency	☐	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	☐	The top part > Date* > The date w hen the customer ledger document w as created.By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	☐	Mandatory field: The Top part > Due date* > The date w hen payment for the document is due, in accordance w ith the credit terms.
documentType	varchar2	Document Type	☐	The top part > Type > The document type. The follow ing types are available: invoice, debit note, credit note, overdue charge, credit w rite-off
dontEmail	char	Don't Email	☐	
dontPrint	char	Don't Print	☐	
dunningLetterDate	datetime	Dunning Letter Date	☐	The Financial details tab > The Dunning information section > Dunning letter date > The date of the last released dunning letter in w hich the document w as listed.
dunningLetterLevel	int32	Dunning Letter Level	☐	The Financial details tab > The Dunning information section > Dunning level > The dunning level of the document.

Name	Data Type	Label	Required	Documentation
unitPriceInCurrency	double	Unit Price in Currency	☐	Background calculation giving you the Unit price in your default currency. This field is applicable if the amount is given in another currency than your default.
uom	varchar2	Unit of Measure	☐	UoM > The unit of measure (UoM) for the item.
vatCode_description	varchar2	VAT Code Description	☐	Click on the magnifier. > The description.
vatCode_id	varchar2	VAT Code ID	☐	Click on the magnifier. > The identifier.
vatExemptTotal	double	VAT Exempt Total	☐	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax w ith the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	☐	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerDebitNoteLines: Visma.net Financials Customer Debit Note Lines

Get a range of Customer Debit Notes - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeData for Customer Debit Note

Catalog: VismaNet

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Schema: CustomerDebitNote

Label: Customer Debit Note Lines

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDebitNoteLines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
branch		☐		Filter by Branch
closedFinancialPeriod		☐		The date of the closing of the financial period.
createdDateTime		☐		This value, generated by the system, indicates the creation date and time. Use it to retrieve all records that have been created since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
createdDateTimeCondition		☐		This value represents the condition to be applied w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
customer		☐		Filter by Customer
customerRefNumber		☐		The top part > External reference > The external

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Required	Default Value	Documentation
				reference used in AutoInvoice.
documentDate		☐		This value indicates the document date. Use it to retrieve all records that have the Document Date since that time, up to the future.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```_Note:_ __DocumentDate__ and __DocumentDateCondition__ are __mutually inclusive__.
documentDateCondition		☐		This value represents the condition to be applied to the Document Date w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __DocumentDate__ and __DocumentDateCondition__ are __mutually inclusive__.
documentDueDate		☐		The date w hen payment for the document is due, in accordance w ith the credit terms.
documentDueDateCondition		☐		This value represents the condition to be applied to the Due Date w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal
documentType		☐		The field is deprecated for specific customer document endpoints. It w ill only be usable from customer document endpoint. (Values: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime		☐		The date and time for w hen the document last released a dunning letter.
dunningLetterDateTimeCondition		☐		Set time/date as before (<), after (>), before and including (=<) OR after and including (=>) to filter on time frame.
dunningLevel		☐		The dunning level of the document.
expandApplications		☐		True if you w ant to see all dunning information regarding this document.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Required	Default Value	Documentation
expandAttachments		☐		True if you want to see all attachments regarding this document.
expandDunningInformation		☐		
expandInvoiceAddress		☐		True if you want to see all information regarding the invoice address for this document.
expandTaxDetails		☐		True if you want to see all VAT details regarding this document.
externalReference		☐		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod		☐		The financial period to which the transactions recorded in the document is posted. Format YYYYMM.
greaterThanValue		☐		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime		☐		This value, generated by the system, indicates the last time the record was modified. Use it to retrieve all records that have been modified since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __LastModifiedDateTime__ and __LastModifiedDateTimeCondition__ are __mutually inclusive__.
lastModifiedDateTimeCondition		☐		This value represents the condition to be applied when retrieving records.Accepted values (without the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __LastModifiedDateTime__ and __LastModifiedDateTimeCondition__ are __mutually inclusive__.
paymentReference		☐		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance with the number series assigned to cash sales in the Customer ledger preferences window ..
project		☐		The project with which the document is associated.
released		☐		Parameter for showing if invoice has been released or not.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Required	Default Value	Documentation
status		☐		The status of the document. Use the dropdow n to select status. (Values: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerDebitNoteLines are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active_2	char	Account Active 2	☐	
account_active	char	Account Active	☐	
account_description_2	varchar2	Account Description 2	☐	Name of item/description
account_description	varchar2	Account Description	☐	Name of item/description
account_externalCode1_2	varchar2	Account External Code 1 2	☐	Account class > The identifier of the account class.
account_externalCode1	varchar2	Account External Code 1	☐	Account class > The identifier of the account class.
account_externalCode2_2	varchar2	Account External Code 2 2	☐	Account class > The name of the account class.
account_externalCode2	varchar2	Account External Code 2	☐	Account class > The name of the account class.
account_number_2	varchar2	Account Number 2	☐	Number of item
account_number	varchar2	Account Number	☐	Number of item
account_type_2	varchar2	Account Type 2	☐	Account > The account number.
account_type	varchar2	Account Type	☐	Account > The account number.
amount_2	double		☐	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 w indow .If the check box is cleared, then the value appears w hen the document status is Open.
amount	double	Amount	☐	Amount > The amount after the discount has been applied. The value of this read-only boxis calculated automatically by deducting the discount amount from the extended price.
amountInCurrency_2	double	Amount in Currency 2	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				another currency than your default.
amountInCurrency	double	Amount in Currency	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	☐	The top part > Balance > For an open customer ledger document, the balance after any cash discount w as taken. For a document used in the application process, this is the balance after the payments w ere applied.
balanceInCurrency	double	Balance in Currency	☐	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name_2	varchar2	Branch Number Name 2	☐	Click the magnifier. > The name.
branchNumber_name	varchar2	Branch Name	☐	Click the magnifier. > The name.
branchNumber_number_2	varchar2	Branch Number 2	☐	Click the magnifier. > The identifier.
branchNumber_number	varchar2	Branch Number	☐	Click the magnifier. > The identifier.
cashAccount	varchar2	Cash Account	☐	Financial details tab > The payment information section > Cash account > The cash account associated w ith the payment method.
cashDiscount	double	Cash Discount	☐	The top part > Cash discount > The cash discount amount that has been or w ill be taken on the document, w hich the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	☐	Mandatory field: The Top part > Cash discount date* > The end date of the cash discount period, w hich the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	☐	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
childRecord_name	varchar2		☐	Click the magnifier. > The name.
childRecord_number	varchar2		☐	Click the magnifier. > The identifier.

CustomerDebitNoteLinesByNumber: Visma.net Financials Customer Debit Note Lines by Number

Get a specific Customer Debit NoteData for Customer Debit Note The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerDebitNote

Label: Customer Debit Note Lines by Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDebitNoteLinesByNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
				Date when retrieving records.Accepted values (without the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal
documentType		☐		The field is deprecated for specific customer document endpoints. It will only be usable from customer document endpoint. (Values: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime		☐		The date and time for when the document last released a dunning letter.
dunningLetterDateTimeCondition		☐		Set time/date as before (<), after (>), before and including (=<) OR after and including (=>) to filter on time frame.
dunningLevel		☐		The dunning level of the document.
expandApplications		☐		True if you want to see all dunning information regarding this document.
expandAttachments		☐		True if you want to see all attachments regarding this document.
expandDunningInformation		☐		
expandInvoiceAddress		☐		True if you want to see all information regarding the invoice address for this document.
expandTaxDetails		☐		True if you want to see all VAT details regarding this document.
externalReference		☐		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod		☐		The financial period to which the transactions recorded in the document is posted. Format YYYYMM.
greaterThanValue		☐		Greater than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime		☐		This value, generated by the system, indicates the last time the record was modified. Use it to retrieve all records that have been modified since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Required	Default Value	Documentation
				dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __LastModifiedDateTime__ and __LastModifiedDateTimeCondition__ are __mutually inclusive__.
lastModifiedDateTimeCondition		☐		This value represents the condition to be applied w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __LastModifiedDateTime__ and __LastModifiedDateTimeCondition__ are __mutually inclusive__.
paymentReference		☐		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance w ith the number series assigned to cash sales in the Customer ledger preferences w indow ..
project		☐		The project w ith w hich the document is associated.
released		☐		Parameter for show ing if invoice has been released or not.
status		☐		The status of the document. Use the dropdow n to select status. (Values: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerDebitNoteLineSubaccountSegments are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active_2	char	Account Active 2	☐	
account_active	char	Account Active	☐	
account_description_2	varchar2	Account Description 2	☐	Name of item/description
account_description	varchar2	Account Description	☐	Name of item/description
account_externalCode1_2	varchar2	Account External Code 1 2	☐	Account class > The identifier of the account class.
account_externalCode1	varchar2	Account External Code 1	☐	Account class > The identifier of the account class.
account_externalCode2_2	varchar2	Account External Code 2 2	☐	Account class > The name of the account class.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
account_externalCode2	varchar2	Account External Code 2	☐	Account class > The name of the account class.
account_number_2	varchar2	Account Number 2	☐	Number of item
account_number	varchar2	Account Number	☐	Number of item
account_type_2	varchar2	Account Type 2	☐	Account > The account number.
account_type	varchar2	Account Type	☐	Account > The account number.
active	char	Active	☐	Active > The status of the identifier.
amount_2	double		☐	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 w indow .If the check box is cleared, then the value appears w hen the document status is Open.
amount	double	Amount	☐	Amount > The amount after the discount has been applied. The value of this read-only boxis calculated automatically by deducting the discount amount from the extended price.
amountInCurrency_2	double	Amount in Currency 2	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
amountInCurrency	double	Amount in Currency	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	☐	The top part > Balance > For an open customer ledger document, the balance after any cash discount w as taken. For a document used in the application process, this is the balance after the payments w ere applied.
balanceInCurrency	double	Balance in Currency	☐	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name_2	varchar2	Branch Number Name 2	☐	Click the magnifier. > The name.
branchNumber_name	varchar2	Branch Name	☐	Click the magnifier. > The name.
branchNumber_number_2	varchar2	Branch Number 2	☐	Click the magnifier. > The identifier.

Name	Data Type	Label	Required	Documentation
				Override check box is selected in the AR303000 w indow .
customer_name	varchar2	Customer Name	☐	Click the magnifier. > The name.
customer_number	varchar2	Customer Number	☐	
customerProject	varchar2	Customer Project	☐	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	varchar2	Custom Reference Number	☐	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	varchar2	VAT Zone Description	☐	Click on the magnifier. > The description.
customerVatZone_id	varchar2	VAT Zone ID	☐	Click on the magnifier. > The identifier.
deductableAmount	double		☐	
deferralCode	varchar2		☐	The deferral code assigned to the stock item or non-stock item specified in thisdocument line.Upon release of the document, the system generates a deferralschedule (or schedules) based on the settings defined in this deferral code.
deferralSchedule	int32		☐	Original deferral schedule > A read-only column filled in by the system in the Cash return documents created by the reversing process. It show s the identifier of the deferral schedule associated w ith the original Cash sale document.
description_2	varchar2	Description 2	☐	Transaction descr. > Any brief comment relevant to the transaction.The alphanumeric string may contain up to 30 characters.
description	varchar2	Description	☐	Description > The description of the identifier.
detailTotal	double	Detail Total	☐	The top part > Detail total > The document total, w hich the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	☐	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
discountAmount	double		☐	Discount amount > The amount of the line-level discount that has been applied manually orautomatically to this line.The system selects the Manual Discount check boxand

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				calculates the line amount after you have entered the discount amountmanually and save your changes or added a new line.
discountAmountInCurrency	double		☐	Background calculation giving you the Discount amount in your default currency. This field is applicable if the amount is given in another currency than your default.
discountCode	varchar2	Discount Code	☐	The code of the line discount that has been applied to this line automatically or manually.
discountPercent	double	Discount Percent	☐	Discount percent > The percent of the line-level discount that has been applied manually orautomatically.The system selects the Manual Discount check box andcalculates the discount amount after you have entered the percent manually andsaved your changes or added a new line.
discountTotal	double	Discount Total	☐	The top part > Discount total > The document discount total.
discountTotalInCurrency	double	Discount Total in Currency	☐	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	☐	The top part > Date* > The date w hen the customer ledger document w as created.By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	☐	Mandatory field: The Top part > Due date* > The date w hen payment for the document is due, in accordance w ith the credit terms.
documentType	varchar2	Document Type	☐	The top part > Type > The document type. The follow ing types are available: invoice, debit note, credit note, overdue charge, credit w rite-off
dontEmail	char	Don't Email	☐	
dontPrint	char	Don't Print	☐	
dunningLetterDate	datetime	Dunning Letter Date	☐	The Financial details tab > The Dunning information section > Dunning letter date > The date of the last released dunning letter in w hich the document w as listed.
dunningLetterLevel	int32	Dunning Letter Level	☐	The Financial details tab > The Dunning information section >

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				Dunning level > The dunning level of the document.
errorInfo_2	varchar2	Error Information 2	☐	
errorInfo	varchar2	Error Message	☐	
exchangeRate	double	Exchange Rate	☐	The Top part > Currency > The middle field, click the dow n arrow > Exchange rate.
externalLink	varchar2		☐	
externalReference	varchar2	External Reference	☐	The Top part > External reference > The external reference used in AutoInvoice.
financialPeriod	varchar2	Financial Period	☐	The financial period to w hich the transactions recorded in the document should be posted. Format YYYYMM.
hold	char	Hold	☐	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document w ith the On Hold status may be edited and cannot be released.
inventoryNumber	varchar2	Inventory Number	☐	Item ID > The item ID of the line item, if applicable. Only a non-stock item can be selected.
invoiceAddress_addressId	int32	Invoice Address ID	☐	
invoiceAddress_addressLine1	varchar2	Invoice Address Line 1	☐	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	varchar2	Invoice Address Line 2	☐	Address 2 > The second line of the address.
invoiceAddress_addressLine3	varchar2	Invoice Address Line 3	☐	Address 3 > The third line of the address.
invoiceAddress_city	varchar2	Invoice Address City	☐	City > The city.
invoiceAddress_country_errorInfo	varchar2	Invoice Address Country Error Information	☐	
invoiceAddress_country_id	varchar2	Invoice Address Country ID	☐	Mandatory field: Country ID* > The unique tw o-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		☐	
invoiceAddress_country_metadata_totalCount	int64		☐	
invoiceAddress_country_name	varchar2	Invoice Address Country Name	☐	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	varchar2	Invoice Address County ID	☐	Click the magnifier > The identifier
invoiceAddress_county_name	varchar2	Invoice Address County Name	☐	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	char		☐	Override address > A check box that indicates (if selected)

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	varchar2	Invoice Address Postal Code	☐	Postcode > The postcode.
invoiceContact_attention	varchar2	Invoice Contact Attention	☐	
invoiceContact_businessName	varchar2		☐	
invoiceContact_contactId	int32	Invoice Contact ID	☐	
invoiceContact_email	varchar2	Invoice Contact Email Address	☐	
invoiceContact_overrideContact	char		☐	
invoiceContact_phone1	varchar2	Invoice Contact Phone 1	☐	
invoiceText	varchar2	Invoice Text	☐	The top part > Invoice text > Any user-provided description of the customer ledger document.
isRotRutDeductible_2	char	Is ROTRUT Deductible 2	☐	The top part > Domestic services deductible document > A check box indicating if the document is Rot/rut deductible (applicable for the Swedish markets)
isRotRutDeductible	char		☐	Domestic services deductible document > A check box indicating if the document is Rot/rut deductible (applicable for the Swedish markets)
itemType	varchar2	Item Type	☐	
lastModifiedDateTime_2	datetime	Last Modified Date/Time 2	☐	System generated field for last modification date/time of document.
lastModifiedDateTime	datetime	Last Modified	☐	System generated information.
lineNumber	int32	Line Number	☐	Line no. > A counter of lines in the overview of cash sales document overview .
location_countryId	varchar2	Location Country ID	☐	Location*.
location_id	varchar2	Location ID	☐	Click the magnifier > The identifier
location_name	varchar2	Location Name	☐	Click the magnifier > The displayed name
manualAmount	double	Manual Amount	☐	Manual amount > a check box indicating that the amount has been entered manually.
manualAmountInCurrency	double		☐	Background calculation giving you the Manual amount in your default currency. This field is applicable if the amount is given in another currency than your default.
manualDiscount	char	Manual Discount	☐	Manual discount > A check box that indicates (if selected)

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				that the discount has been appliedmanually.If you clear the check box, the system clears entered discount percent,or discount amount, or selected discount code.
metadata_maxPageSize_2	int64		☐	
metadata_maxPageSize	int64	Metadata Max Pagesize	☐	
metadata_totalCount_2	int64		☐	
metadata_totalCount	int64	Total Count	☐	
note_2	varchar2	Note 2	☐	Icon Notes on top of the w indow > Pop-up w indow for providing any user-defined text connected to the document.
note	varchar2	Note	☐	Table > Icon Notes > Pop-up w indow for providing any user-defined text connected to the order.
origInvoiceDate	datetime	Original Invoice Date	☐	The top part > Orig invoice date > The date based on w hich the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences.By default, for a new document, it is the current business date, but you can change the date.
paymentMethod_description	varchar2	Payment Method Description	☐	Click on the magnifier. > The description.
paymentMethod_id	varchar2	Payment Method ID	☐	Click on the magnifier. > The identifier.
paymentReference	varchar2	Payment Reference	☐	///The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance w ith the number series assigned to cash sales in the Customer ledger preferences w indow ..
postPeriod	varchar2	Post Period	☐	The top part > Post period > The period to w hich the document should be posted. Format YYYYMM.
project_description	varchar2	Project Description	☐	Click on the magnifier. > The description.
project_id	varchar2	Project ID	☐	Click on the magnifier. > The identifier.
project_internalId	int32		☐	The internal identifier.
quantity	double	Quantity	☐	Quantity > The quantity of items (goods or services) of a particular type sold to the customer.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
referenceNumber	varchar2	Reference Number	☐	The Top part > Ref. no. > The reference number of the customer ledger document in the system.
revoked	char	Revoke	☐	
roundingDiff	double	Rounding Difference	☐	The Top part > Rounding diff. > The difference betw een the original amount and the rounded amount.
salesPerson_2_description	varchar2	Salesperson 2 Description	☐	Click on the magnifier. > The description.
salesPerson_2_id	varchar2	Salesperson 2 ID	☐	Click on the magnifier. > The identifier.
salesperson	varchar2	Salesperson	☐	The field is deprecated for customer document endpoints, please use Seller instead
salesPersonDescr	varchar2	Sales Person Name	☐	The field is deprecated for customer document endpoints, please use SalesPerson instead
salesPersonID	int32	Sales Person ID	☐	The field is deprecated for customer document endpoints, please use SalesPerson instead
segmentDescription	varchar2		☐	The Segment values w indow > The Top part > The description of the segment.
segmentId	int32	Segment ID	☐	The Segment values w indow > The Top part > The ID of the segment.
segmentValue	varchar2	Segment Value	☐	The Segment values w indow > The table > The value of the segment, alphanumeric.
segmentValueDescription	varchar2	Segment Value Description	☐	The Segment values w indow > The table > The description of the segment value.
seller_description	varchar2	Seller Description	☐	Click on the magnifier. > The description.
seller_id	varchar2	Seller ID	☐	Click on the magnifier. > The identifier.
soOrderNbr	varchar2		☐	
soOrderType	varchar2		☐	
soShipmentNbr	varchar2		☐	
status	varchar2	Status	☐	The top part > Status > The status of the document, w hich can be one of the follow ing: Hold, Balanced, Voided, Scheduled, Open, Closed, Pending print, Pending email.
subaccount_active	char	Sub Account Active 2	☐	Active > The status of the identifier.
subaccount_description	varchar2	Subaccount Description	☐	Description > The description of the identifier.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
subaccount_errorInfo	varchar2	Sub Account Error Message	☐	
subaccount_lastModifiedDateTime	datetime	Sub Account Last Modified	☐	System generated information.
subaccount_metadata_maxPageSize	int64	Sub Account Metadata Max Pagesize	☐	
subaccount_metadata_totalCount	int64	Sub Account Metadata Total Count	☐	
subaccount_subaccountId	int32	Sub Account ID	☐	SubID > The identifier of the subaccount.
subaccount_subaccountNumber	varchar2	Sub Account Number	☐	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
subaccount_timeStamp	blob		☐	The timestamp of the subaccount, used for concurrency control.
subaccountId	int32		☐	SubID > The identifier of the subaccount.
subaccountNumber	varchar2		☐	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
termEndDate	datetime	Term End Date	☐	The date w hen the process of the deferred revenue recognition should finishfor the selected item; this date can be specified manually if the deferral codeassigned to the item is based on the Flexible by Periods, Prorate by days orFlexible by Days in Period recognition method.This column appears only if theDeferred Revenue Management feature is enabled on the Enable/Disable Features form.
termStartDate	datetime	Term Start Date	☐	The date w hen the process of deferred revenue recognition should start for theselected item; this date can be specified manually if the deferral code assignedto the item is based on the Flexible by Periods, Prorate by days or Flexible byDays in Period recognition method.This column appears only if the DeferredRevenue Management feature is enabled on the Enable/Disable Features screen.
timeStamp_2	blob		☐	
timeStamp	blob	Timestamp	☐	The timestamp of the subaccount, used for concurrency control.
typeOfWork_description	varchar2		☐	
typeOfWork_rutRotType	varchar2		☐	
typeOfWork_xmlTag	varchar2		☐	

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
unitPrice	double		☐	Unit price > The unit price set for the item or service. If you want to update the unit priceautomatically to the current value(that is, the applicable sales or default price),you can use the Recalculate Prices and Discounts action.If you have modifiedthe unit price and saved the document, the value will not be updated by thesystem if you change the document date.
unitPriceInCurrency	double	Unit Price in Currency	☐	Background calculation giving you the Unit price in your default currency. This field is applicable if the amount is given in another currency than your default.
uom	varchar2	Unit of Measure	☐	UoM > The unit of measure (UoM) for the item.
vatCode_description	varchar2	VAT Code Description	☐	Click on the magnifier. > The description.
vatCode_id	varchar2	VAT Code ID	☐	Click on the magnifier. > The identifier.
vatExemptTotal	double	VAT Exempt Total	☐	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax with the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	☐	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerDebitNoteLineSubaccountSegmentsByDebitNoteNumber: Visma.net Financials Customer Debit Note Line Subaccount Segments by Debit Note Number

Get a specific Customer Debit NoteData for Customer Debit Note The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerDebitNote

Label: Customer Debit Note Line Subaccount Segments by Debit Note Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDebitNoteLineSubaccountSegmentsByDebitNoteNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
debitNoteNumber		☑		Identifies the Customer Debit Note

Columns of Table Function

The columns of the table function CustomerDebitNoteLineSubaccountSegmentsByDebitNoteNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active_2	char	Account Active 2	☐	
account_active	char	Account Active	☐	
account_description_2	varchar2	Account Description 2	☐	Name of item/description
account_description	varchar2	Account Description	☐	Name of item/description

CustomerDebitNotePrintByDebitNoteNumber: Visma.net Financials Customer Debit Note Print by Debit Note Number

Get the print report of a Customer Debit NoteThe File is in Content of the message

Catalog: VismaNet

Schema: CustomerDebitNote

Label: Customer Debit Note Print by Debit Note Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDebitNotePrintByDebitNoteNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
debitNoteNumber		☑		Identifies the customer debit note
If-Match		☐		The If-Match HTTP header allow s clients to update a resource only if its current version matches a specific ETag. This mechanism helps prevent conflicts w hen multiple clients attempt to modify the same resource simultaneously.The If-Match header should be included in the request headers using the follow ing syntax: If-Match: "etag_value"* If the update is successful, the server responds w ith 204 No Content and

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Required	Default Value	Documentation
				includes the new ETag value in the response headers.* If the ETag on the server does not match the value provided in the If-Match header, the server responds with 412 Precondition Failed.

Columns of Table Function

The columns of the table function CustomerDebitNotePrintByDebitNoteNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
COMPANY_CODE	varchar2(30)	Company Code	☑	Partition code, segmenting the data.
COMPANY_NAME	varchar2(240)	Company Name	☑	Name of the partition.
id	varchar2	ID	☐	
stateLocation	varchar2		☐	

CustomerDebitNotes: Visma.net Financials Customer Debit Notes

Get a range of Customer Debit Notes - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeData for Customer Debit Note

Catalog: VismaNet

Schema: CustomerDebitNote

Label: Customer Debit Notes

Retrieve: true

Insert: true

Update: false

Delete: false

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDebitNotes. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
branch		☐		Filter by Branch
closedFinancialPeriod		☐		The date of the closing of the financial period.
createdDateTime		☐		This value, generated by the system, indicates the creation date and time. Use it to retrieve all records that have been created since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
createdDateTimeCondition		☐		This value represents the condition to be applied w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
customer		☐		Filter by Customer
customerRefNumber		☐		The top part > External reference > The external reference used in AutoInvoice.
documentDate		☐		This value indicates the document date. Use it to retrieve all records that have the Document Date since that time, up to the future.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```_Note:_ __DocumentDate__ and __DocumentDateCondition__ are __mutually inclusive__.

CustomerDebitNoteSubaccountSegments: Visma.net Financials Customer Debit Note Subaccount Segments

Get a range of Customer Debit Notes - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeData for Customer Debit Note

Catalog: VismaNet

Schema: CustomerDebitNote

Label: Customer Debit Note Subaccount Segments

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDebitNoteSubaccountSegments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
branch		☐		Filter by Branch
closedFinancialPeriod		☐		The date of the closing of the financial period.
createdDateTime		☐		This value, generated by the system, indicates the creation date and time. Use it to retrieve all records that have been created since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
createdDateTimeCondition		☐		This value represents the condition to be applied w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
customer		☐		Filter by Customer
customerRefNumber		☐		The top part > External reference > The external reference used in AutoInvoice.
documentDate		☐		This value indicates the document date. Use it to retrieve all records that have the Document Date since that time, up to the future.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```_Note:_ __DocumentDate__ and __DocumentDateCondition__ are __mutually inclusive__.
documentDateCondition		☐		This value represents the condition to be applied to the Document Date w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __DocumentDate__ and __DocumentDateCondition__ are __mutually inclusive__.

CustomerDebitNoteSubaccountSegmentsByDebitNoteNumber: Visma.net Financials Customer Debit Note Subaccount Segments by Debit Note Number

Get a specific Customer Debit NoteData for Customer Debit Note The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerDebitNote

Label: Customer Debit Note Subaccount Segments by Debit Note Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDebitNoteSubaccountSegmentsByDebitNoteNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

CustomerDebitNoteTaxDetailsByDebitNoteNumber: Visma.net Financials Customer Debit Note Tax Details by Debit Note Number

Get a specific Customer Debit NoteData for Customer Debit Note The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerDebitNote

Label: Customer Debit Note Tax Details by Debit Note Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDebitNoteTaxDetailsByDebitNoteNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

CustomerDocumentSubaccountSegments: Visma.net Financials Customer Document Subaccount Segments

Gets a range of Customer Documents - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeChange log:2020-May:Added forced paginationData for Customer Document

Catalog: VismaNet

Schema: CustomerDocument

Label: Customer Document Subaccount Segments

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerDocumentSubaccountSegments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

CustomerInvoiceApplicationsByInvoiceNumber: Visma.net Financials Customer Invoice Applications by Invoice Number

Get a specific InvoiceData for Customer InvoiceThe response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerInvoice

Label: Customer Invoice Applications by Invoice Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerInvoiceApplicationsByInvoiceNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
invoiceNumber		☑		Identifies the Invoice

Columns of Table Function

The columns of the table function CustomerInvoiceApplicationsByInvoiceNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active	char	Account Active	☐	
account_description	varchar2	Account Description	☐	Name of item/description
account_externalCode1	varchar2	Account External Code 1	☐	Account class > The identifier of the account class.

Get a range of Invoices - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeChange log:2020-May:Added forced paginationData for Customer Invoice

Catalog: VismaNet

Schema: CustomerInvoice

Label: Customer Invoice Attachments

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerInvoiceAttachments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
branch		☐		Filter by Branch

CustomerInvoiceByNumber: Visma.net Financials Customer Invoice by Number

Get a specific InvoiceData for Customer InvoiceThe response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerInvoice

Label: Customer Invoice by Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerInvoiceByNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

released		☐		Parameter for show ing if invoice has been released or not.
status		☐		The status of the document. Use the dropdow n to select status. (Values: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerInvoiceLineAttachments are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active_2	char	Account Active 2	☐	
account_active	char	Account Active	☐	
account_description_2	varchar2	Account Description 2	☐	Name of item/description
account_description	varchar2	Account Description	☐	Name of item/description
account_externalCode1_2	varchar2	Account External Code 1 2	☐	Account class > The identifier of the account class.
account_externalCode1	varchar2	Account External Code 1	☐	Account class > The identifier of the account class.
account_externalCode2_2	varchar2	Account External Code 2 2	☐	Account class > The name of the account class.
account_externalCode2	varchar2	Account External Code 2	☐	Account class > The name of the account class.
account_number_2	varchar2	Account Number 2	☐	Number of item

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
account_number	varchar2	Account Number	☐	Number of item
account_type_2	varchar2	Account Type 2	☐	Account > The account number.
account_type	varchar2	Account Type	☐	Account > The account number.
accountingCostRef	varchar2		☐	
amount_2	double		☐	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 w indow .If the check box is cleared, then the value appears w hen the document status is Open.
amount	double	Amount	☐	Amount > The amount after the discount has been applied. The value of this read-only boxis calculated automatically by deducting the discount amount from the extended price.
amountInCurrency_2	double	Amount in Currency 2	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
amountInCurrency	double	Amount in Currency	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	☐	The top part > Balance > For an open customer ledger document, the balance after any cash discount w as taken. For a document used in the application process, this is the balance after the payments w ere applied.
balanceInCurrency	double	Balance in Currency	☐	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name_2	varchar2	Branch Number Name 2	☐	Click the magnifier. > The name.
branchNumber_name	varchar2	Branch Name	☐	Click the magnifier. > The name.
branchNumber_number_2	varchar2	Branch Number 2	☐	Click the magnifier. > The identifier.
branchNumber_number	varchar2	Branch Number	☐	Click the magnifier. > The identifier.
cashAccount	varchar2	Cash Account	☐	Financial details tab > The payment information section >

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				Cash account > The cash account associated w ith the payment method.
cashDiscount	double	Cash Discount	☐	The top part > Cash discount > The cash discount amount that has been or w ill be taken on the document, w hich the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	☐	Mandatory field: The top part > Cash discount date * > The end date of the cash discount period, w hich the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	☐	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
childRecord_name	varchar2		☐	Click the magnifier. > The name.
childRecord_number	varchar2		☐	Click the magnifier. > The identifier.
closedFinancialPeriod	varchar2	Closed Financial Period	☐	Format YYYYMM.
COMPANY_CODE	varchar2(30)	Company Code	☑	Partition code, segmenting the data.
COMPANY_NAME	varchar2(240)	Company Name	☑	Name of the partition.
contact_id	int32	Contact ID	☐	Click the magnifier > The identifier
contact_name	varchar2	Contact Name	☐	Click the magnifier > The displayed name
contractDocRef	varchar2		☐	
cost	double	Cost	☐	Cost > The total cost of the line in default currency. The value w ill alw ays be 0 for unreleased documents.
createdDateTime	datetime	Created	☐	The Attachments tab > Creation time > The date the attachment w as created.
creditTerms_description	varchar2	Credit Terms Description	☐	Click on the magnifier. > The description.
creditTerms_id	varchar2	Credit Terms ID	☐	Click on the magnifier. > The identifier.
currencyId	varchar2	Currency ID	☐	The top part > Currency > The currency of the document. By default, it is the customer's default currency,but it can be changed if the Allow Currency Override check box is selected in the AR303000 w indow .

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
customer_name	varchar2	Customer Name	☐	Click the magnifier. > The name.
customer_number	varchar2	Customer Number	☐	
customerProject	varchar2	Customer Project	☐	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	varchar2	Custom Reference Number	☐	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	varchar2	VAT Zone Description	☐	Click on the magnifier. > The description.
customerVatZone_id	varchar2	VAT Zone ID	☐	Click on the magnifier. > The identifier.
debtCollection_caseNumber	varchar2		☐	Debt Collection Case Number
debtCollection_caseStatus	varchar2		☐	Debt Collection Case Number
debtCollection_caseType	varchar2		☐	Debt Collection Case Number
debtCollection_caseUrl	varchar2		☐	Debt Collection Case Number
deductableAmount	double		☐	
deferralCode	varchar2		☐	The deferral code assigned to the stock item or non-stock item specified in thisdocument line.Upon release of the document, the system generates a deferralschedule (or schedules) based on the settings defined in this deferral code.
deferralSchedule	int32		☐	Original deferral schedule > A read-only column filled in by the system in the Cash return documents created by the reversing process. It show s the identifier of the deferral schedule associated w ith the original Cash sale document.
description	varchar2	Description	☐	Transaction descr. > Any brief comment relevant to the transaction.The alphanumeric string may contain up to 30 characters.
detailTotal	double	Detail Total	☐	The top part > Detail total > The document total, w hich the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	☐	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
directDebitMandate_id	guid		☐	Mandate Guid as stored in the database.
directDebitMandate_mandateDescription	varchar2		☐	Mandate description show on Billing Address tab

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
directDebitMandate_mandateId	varchar2		☐	The id show n on Billing Address tab
discountAmount	double		☐	Discount amount > The amount of the line-level discount that has been applied manually orautomatically to this line.The system selects the Manual Discount check boxand calculates the line amount after you have entered the discount amountmanually and save your changes or added a new line.
discountAmountInCurrency	double		☐	Background calculation giving you the Discount amount in your default currency. This field is applicable if the amount is given in another currency than your default.
discountCode	varchar2	Discount Code	☐	The code of the line discount that has been applied to this line automatically or manually.
discountPercent	double	Discount Percent	☐	Discount percent > The percent of the line-level discount that has been applied manually orautomatically.The system selects the Manual Discount check box andcalculates the discount amount after you have entered the percent manually andsaved your changes or added a new line.
discountTotal	double	Discount Total	☐	The top part > Discount total > The document discount total.
discountTotalInCurrency	double	Discount Total in Currency	☐	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	☐	The top part > Date* > The date w hen the customer ledger document w as created.By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	☐	Mandatory field: The top part > Due date* > The date w hen payment for the document is due, in accordance w ith the credit terms.
documentType	varchar2	Document Type	☐	The top part > Type > The document type. The follow ing types are available: invoice, debit note, credit note, overdue charge, credit w rite-off
dontEmail	char	Don't Email	☐	
dontPrint	char	Don't Print	☐	

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
dunningLetterDate	datetime	Dunning Letter Date	☐	The Financial details tab > The dunning info section > Dunning letter date > The date of the last released dunning letter in w hich the document w as listed.
dunningLetterLevel	int32	Dunning Letter Level	☐	The Financial details tab > The dunning info section > Dunning level > The dunning level of the document.
endDate_2	datetime		☐	
endDate	datetime	End Date	☐	
errorInfo	varchar2	Error Message	☐	
exchangeRate	double	Exchange Rate	☐	
excludeDebtCollection	char		☐	Exclude Debt Collection for Autocollect
externalLink	varchar2		☐	
externalReference	varchar2	External Reference	☐	The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	varchar2	Financial Period	☐	The financial period to w hich the transactions recorded in the document should be posted. Format YYYYMM.
hold	char	Hold	☐	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document w ith the On Hold status may be edited and cannot be released.
id	guid	ID	☐	The ID of the attachment
inventoryNumber	varchar2	Inventory Number	☐	Item ID > The item ID of the line item, if applicable. Only a non-stock item can be selected.
invoiceAddress_addressId	int32	Invoice Address ID	☐	
invoiceAddress_addressLine1	varchar2	Invoice Address Line 1	☐	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	varchar2	Invoice Address Line 2	☐	Address 2 > The second line of the address.
invoiceAddress_addressLine3	varchar2	Invoice Address Line 3	☐	Address 3 > The third line of the address.
invoiceAddress_city	varchar2	Invoice Address City	☐	City > The city.
invoiceAddress_country_errorInfo	varchar2	Invoice Address Country Error Information	☐	
invoiceAddress_country_id	varchar2	Invoice Address Country ID	☐	Mandatory field: Country ID* > The unique tw o-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		☐	

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
invoiceAddress_country_metadata_totalCount	int64		☐	
invoiceAddress_country_name	varchar2	Invoice Address Country Name	☐	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	varchar2	Invoice Address County ID	☐	Click the magnifier > The identifier
invoiceAddress_county_name	varchar2	Invoice Address County Name	☐	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	char		☐	Override address > A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	varchar2	Invoice Address Postal Code	☐	Postcode > The postcode.
invoiceContact_attention	varchar2	Invoice Contact Attention	☐	
invoiceContact_businessName	varchar2		☐	
invoiceContact_contactId	int32	Invoice Contact ID	☐	
invoiceContact_email	varchar2	Invoice Contact Email Address	☐	
invoiceContact_overrideContact	char		☐	
invoiceContact_phone1	varchar2	Invoice Contact Phone 1	☐	
invoiceText	varchar2	Invoice Text	☐	The top part > Invoice text > Any user-provided description of the customer ledger document.
isRotRutDeductible_2	char	Is ROTRUT Deductible 2	☐	The top part > Domestic services deductible document > A check box indicating if the document is Rot/rut deductible (applicable for the Swedish markets)
isRotRutDeductible	char		☐	
itemType	varchar2	Item Type	☐	
lastModifiedDateTime	datetime	Last Modified	☐	System generated field for last modification date/time of document.
lineNumber	int32	Line Number	☐	Line no. > A counter of lines in the overview of cash sales document overview .
lineType	varchar2	Line Type	☐	Transaction line type.Possible Values:-> Inventory = "GI";-> NonInventory = "GN";-> MiscCharge = "MI";-> Freight = "FR";-> Discount = "DS";-> Reallocation = "RA";
location_countryId	varchar2	Location Country ID	☐	Location*.
location_id	varchar2	Location ID	☐	Click the magnifier > The identifier

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
location_name	varchar2	Location Name	☐	Click the magnifier > The displayed name
manualAmount	double	Manual Amount	☐	Manual amount > a check box indicating that the amount has been entered manually.
manualAmountInCurrency	double		☐	Background calculation giving you the Manual amount in your default currency. This field is applicable if the amount is given in another currency than your default.
manualDiscount	char	Manual Discount	☐	Manual discount > A check box that indicates (if selected) that the discount has been appliedmanually.If you clear the check box, the system clears entered discount percent,or discount amount, or selected discount code.
metadata_maxPageSize	int64	Metadata Max Pagesize	☐	
metadata_totalCount	int64	Total Count	☐	
name	varchar2	Name	☐	The name of the attachment.
note_2	varchar2	Note 2	☐	Icon Notes on top of the w indow > Pop-up w indow for providing any user-defined text connected to the document.
note	varchar2	Note	☐	Table > Icon Notes > Pop-up w indow for providing any user-defined text connected to the order.
originatorDocRef	varchar2		☐	
origInvoiceDate	datetime	Original Invoice Date	☐	The top part > Orig invoice date > The date based on w hich the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences.By default, for a new document, it is the current business date, but you can change the date.
paymentMethod_description	varchar2	Payment Method Description	☐	Click on the magnifier. > The description.
paymentMethod_id	varchar2	Payment Method ID	☐	Click on the magnifier. > The identifier.
paymentReference	varchar2	Payment Reference	☐	///The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance w ith the number series assigned to cash sales in the Customer ledger preferences w indow ..
postPeriod	varchar2	Post Period	☐	The top part > Post period > The period to w hich the

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				document should be posted. Format YYYYMM.
project_description	varchar2	Project Description	☐	Click on the magnifier. > The description.
project_id	varchar2	Project ID	☐	Click on the magnifier. > The identifier.
project_internalId	int32		☐	The internal identifier.
projectTask_description	varchar2	Project Task Description	☐	Click on the magnifier. > The description.
projectTask_id	varchar2	Project Task ID	☐	Click on the magnifier. > The identifier.
projectTask_internalId	int32		☐	The internal identifier.
quantity	double	Quantity	☐	Quantity > The quantity of items (goods or services) of a particular type sold to the customer.
referenceNumber	varchar2	Reference Number	☐	The Top part > Ref. no. > The reference number of the customer ledger document in the system.
revision	int32	Revision	☐	The version of the attachment.
revoked	char	Revoke	☐	
roundingDiff	double	Rounding Difference	☐	The top part > Rounding diff. > The difference between the original amount and the rounded amount.
salesPerson_2_description	varchar2	Salesperson 2 Description	☐	Click on the magnifier. > The description.
salesPerson_2_id	varchar2	Salesperson 2 ID	☐	Click on the magnifier. > The identifier.
salesperson	varchar2	Salesperson	☐	The field is deprecated for customer document endpoints, please use Seller instead
salesPersonDescr	varchar2	Sales Person Name	☐	The field is deprecated for customer document endpoints, please use SalesPerson instead
salesPersonID	int32	Sales Person ID	☐	The field is deprecated for customer document endpoints, please use SalesPerson instead
seller_description	varchar2	Seller Description	☐	Click on the magnifier. > The description.
seller_id	varchar2	Seller ID	☐	Click on the magnifier. > The identifier.
sendToAutoInvoice	char	Send to Auto-invoice	☐	The Attachment tab > Send the file to AutoInvoice > The selected files will be attached to the invoice.
soOrderNbr	varchar2		☐	
soOrderType	varchar2		☐	
soShipmentNbr	varchar2		☐	
startDate_2	datetime		☐	

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
startDate	datetime	Start Date	☐	
status	varchar2	Status	☐	The top part > Status > The status of the document, w hich can be one of the follow ing: Hold, Balanced, V oided, Scheduled, Open, Closed, Pending print, Pending email.
subaccount_active_2	char	Sub Account Active 2	☐	Active > The status of the identifier.
subaccount_active	char	Sub Account Active 2	☐	Active > The status of the identifier.
subaccount_description_2	varchar2	Sub Account Description 2	☐	Description > The description of the identifier.
subaccount_description	varchar2	Subaccount Description	☐	Description > The description of the identifier.
subaccount_errorInfo_2	varchar2	Sub Account Error Information 2	☐	
subaccount_errorInfo	varchar2	Sub Account Error Message	☐	
subaccount_lastModifiedDateTime_2	datetime	Sub Account Last Modified Date/Time 2	☐	System generated information.
subaccount_lastModifiedDateTime	datetime	Sub Account Last Modified	☐	System generated information.
subaccount_metadata_maxPageSize_2	int64	Sub Account Metadata Max Pagesize 2	☐	
subaccount_metadata_maxPageSize	int64	Sub Account Metadata Max Pagesize	☐	
subaccount_metadata_totalCount_2	int64	Sub Account Metadata Total Count 2	☐	
subaccount_metadata_totalCount	int64	Sub Account Metadata Total Count	☐	
subaccount_subaccountId_2	int32	Sub Account ID 2	☐	SubID > The identifier of the subaccount.
subaccount_subaccountId	int32	Sub Account ID	☐	SubID > The identifier of the subaccount.
subaccount_subaccountNumber_2	varchar2	Sub Account Number 2	☐	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
subaccount_subaccountNumber	varchar2	Sub Account Number	☐	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
subaccount_timeStamp_2	blob		☐	The timestamp of the subaccount, used for concurrency control.
subaccount_timeStamp	blob		☐	The timestamp of the subaccount, used for concurrency control.
termEndDate	datetime	Term End Date	☐	Term end date > The date w hen the process of the deferred revenue recognition should finish for the selected item; this date can be specified

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				manually if the deferral code assigned to the item is based on the Flexible by periods, prorate by days or Flexible by days in period recognition method.This column only appears if the Deferred revenue management functionality is enabled in the(CS100000) w indow .
termStartDate	datetime	Term Start Date	☐	Term start date > The date w hen the process of deferred revenue recognition should start for the selected item; this date can be specified manually if the deferral code assigned to the item is based on the Flexible by periods, prorate by days or Flexible by days in period recognition method.This column only appears if the Deferred revenue management functionality is enabled in the(CS100000) w indow .
timeStamp	blob	Timestamp	☐	Identifier that represents a specific version of the resource.It helps to prevent simultaneous updates of the resource from overw riting each other (by using ETags and If-Match headers)
typeOfWork_description	varchar2		☐	
typeOfWork_rutRotType	varchar2		☐	
typeOfWork_xmlTag	varchar2		☐	
unitPrice	double		☐	Unit price > The unit price set for the item or service. If you w ant to update the unit priceautomatically to the current value(that is, the applicable sales or default price),you can use the Recalculate Prices and Discounts action.If you have modifiedthe unit price and saved the document, the value w ill not be updated by thesystem if you change the document date.
unitPriceInCurrency	double	Unit Price in Currency	☐	Background calculation giving you the Unit price in your default currency. This field is applicable if the amount is given in another currency than your default.
uom	varchar2	Unit of Measure	☐	UoM > The unit of measure (UoM) for the item.
vatCode_description	varchar2	VAT Code Description	☐	Click on the magnifier. > The description.
vatCode_id	varchar2	VAT Code ID	☐	Click on the magnifier. > The identifier.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
vatExemptTotal	double	VAT Exempt Total	☐	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax w ith the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	☐	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerInvoiceLineAttachmentsByInvoiceNumber: Visma.net Financials Customer Invoice Line Attachments by Invoice Number

Get a specific InvoiceData for Customer InvoiceThe response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerInvoice

Label: Customer Invoice Line Attachments by Invoice Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerInvoiceLineAttachmentsByInvoiceNumber. A value must be provided at all times for

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
invoiceNumber		☑		Identifies the Invoice

Columns of Table Function

The columns of the table function CustomerInvoiceLineAttachmentsByInvoiceNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active_2	char	Account Active 2	☐	
account_active	char	Account Active	☐

Name	Data Type	Label	Required	Documentation
debtCollection_caseType	varchar2		☐	Debt Collection Case Number
debtCollection_caseUrl	varchar2		☐	Debt Collection Case Number
deductableAmount	double		☐	
deferralCode	varchar2		☐	The deferral code assigned to the stock item or non-stock item specified in thisdocument line.Upon release of the document, the system generates a deferralschedule (or schedules) based on the settings defined in this deferral code.
deferralSchedule	int32		☐	Original deferral schedule > A read-only column filled in by the system in the Cash return documents created by the reversing process. It show s the identifier of the deferral schedule associated w ith the original Cash sale document.
description	varchar2	Description	☐	Transaction descr. > Any brief comment relevant to the transaction.The alphanumeric string may contain up to 30 characters.
detailTotal	double	Detail Total	☐	The top part > Detail total > The document total, w hich the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	☐	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
directDebitMandate_id	guid		☐	Mandate Guid as stored in the database.
directDebitMandate_mandateDescription	varchar2		☐	Mandate description show on Billing Address tab
directDebitMandate_mandateId	varchar2		☐	The id show n on Billing Address tab
discountAmount	double		☐	Discount amount > The amount of the line-level discount that has been applied manually orautomatically to this line.The system selects the Manual Discount check boxand calculates the line amount after you have entered the discount amountmanually and save your changes or added a new line.
discountAmountInCurrency	double		☐	Background calculation giving you the Discount amount in your default currency. This field is applicable if the amount is given in another currency than your default.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
discountCode	varchar2	Discount Code	☐	The code of the line discount that has been applied to this line automatically or manually.
discountPercent	double	Discount Percent	☐	Discount percent > The percent of the line-level discount that has been applied manually orautomatically.The system selects the Manual Discount check box andcalculates the discount amount after you have entered the percent manually andsaved your changes or added a new line.
discountTotal	double	Discount Total	☐	The top part > Discount total > The document discount total.
discountTotalInCurrency	double	Discount Total in Currency	☐	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	☐	The top part > Date* > The date when the customer ledger document was created.By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	☐	Mandatory field: The top part > Due date* > The date when payment for the document is due, in accordance with the credit terms.
documentType	varchar2	Document Type	☐	The top part > Type > The document type. The following types are available: invoice, debit note, credit note, overdue charge, credit write-off
dontEmail	char	Don't Email	☐	
dontPrint	char	Don't Print	☐	
dunningLetterDate	datetime	Dunning Letter Date	☐	The Financial details tab > The dunning info section > Dunning letter date > The date of the last released dunning letter in which the document was listed.
dunningLetterLevel	int32	Dunning Letter Level	☐	The Financial details tab > The dunning info section > Dunning level > The dunning level of the document.
endDate_2	datetime		☐	
endDate	datetime	End Date	☐	
errorInfo	varchar2	Error Message	☐	
exchangeRate	double	Exchange Rate	☐	
excludeDebtCollection	char		☐	Exclude Debt Collection for Autocollect

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
externalLink	varchar2		☐	
externalReference	varchar2	External Reference	☐	The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	varchar2	Financial Period	☐	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	char	Hold	☐	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document with the On Hold status may be edited and cannot be released.
id	guid	ID	☐	The ID of the attachment
inventoryNumber	varchar2	Inventory Number	☐	Item ID > The item ID of the line item, if applicable. Only a non-stock item can be selected.
invoiceAddress_addressId	int32	Invoice Address ID	☐	
invoiceAddress_addressLine1	varchar2	Invoice Address Line 1	☐	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	varchar2	Invoice Address Line 2	☐	Address 2 > The second line of the address.
invoiceAddress_addressLine3	varchar2	Invoice Address Line 3	☐	Address 3 > The third line of the address.
invoiceAddress_city	varchar2	Invoice Address City	☐	City > The city.
invoiceAddress_country_errorInfo	varchar2	Invoice Address Country Error Information	☐	
invoiceAddress_country_id	varchar2	Invoice Address Country ID	☐	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		☐	
invoiceAddress_country_metadata_totalCount	int64		☐	
invoiceAddress_country_name	varchar2	Invoice Address Country Name	☐	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	varchar2	Invoice Address County ID	☐	Click the magnifier > The identifier
invoiceAddress_county_name	varchar2	Invoice Address County Name	☐	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	char		☐	Override address > A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	varchar2	Invoice Address Postal Code	☐	Postcode > The postcode.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

				periods, prorate by days or Flexible by days in period recognition method.This column only appears if the Deferred revenue management functionality is enabled in the(CS100000) w indow .
timeStamp	blob	Timestamp	☐	Identifier that represents a specific version of the resource.It helps to prevent simultaneous updates of the resource from overw riting each other (by using ETags and If-Match headers)
typeOfWork_description	varchar2		☐	
typeOfWork_rutRotType	varchar2		☐	
typeOfWork_xmlTag	varchar2		☐	
unitPrice	double		☐	Unit price > The unit price set for the item or service. If you w ant to update the unit priceautomatically to the current value(that is, the applicable sales or default price),you can use the Recalculate Prices and Discounts action.If you have modifiedthe unit price and saved the document, the value w ill not be updated by thesystem if you change the document date.
unitPriceInCurrency	double	Unit Price in Currency	☐	Background calculation giving you the Unit price in your default currency. This field is applicable if the amount is given in another currency than your default.
uom	varchar2	Unit of Measure	☐	UoM > The unit of measure (UoM) for the item.
vatCode_description	varchar2	VAT Code Description	☐	Click on the magnifier. > The description.
vatCode_id	varchar2	VAT Code ID	☐	Click on the magnifier. > The identifier.
vatExemptTotal	double	VAT Exempt Total	☐	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax w ith the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	☐	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerInvoiceLines: Visma.net Financials Customer Invoice Lines

Get a range of Invoices - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeChange log:2020-May:Added forced paginationData for Customer Invoice

Catalog: VismaNet

Schema: CustomerInvoice

Label: Customer Invoice Lines

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerInvoiceLines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
branch		☐		Filter by Branch
closedFinancialPeriod		☐		The date of the closing of the financial period.
createdDateTime		☐		This value, generated by the system, indicates the creation date and time. Use it to retrieve all records that have been created since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
createdDateTimeCondition		☐		This value represents the condition to be applied w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
customer		☐		Filter by Customer
customerRefNumber		☐		The top part > External reference > The external reference used in AutoInvoice.
documentDate		☐		This value indicates the document date. Use it to retrieve all records that have the Document Date since that time, up to the future.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```_Note:_ __DocumentDate__ and __DocumentDateCondition__ are __mutually inclusive__.
documentDateCondition		☐		This value represents the condition to be applied to the Document Date w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __DocumentDate__ and __DocumentDateCondition__ are __mutually inclusive__.
documentDueDate		☐		The date w hen payment for the document is due, in accordance w ith the credit terms.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Required	Default Value	Documentation
documentDueDateCondition		☐		This value represents the condition to be applied to the Due Date w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal
documentType		☐		The field is deprecated for specific customer document endpoints. It w ill only be usable from customer document endpoint. (Values: Invoice, DebitNote, CreditNote, Payment, VoidPayment, Prepayment, Refund, FinCharge, SmallBalanceWo, SmallCreditWo, CashSale, CashReturn, Undefined, NoUpdate)
dunningLetterDateTime		☐		The date and time for w hen the document last released a dunning letter.
dunningLetterDateTimeCondition		☐		Set time/date as before (<), after (>), before and including (=<) OR after and including (=>) to filter on time frame.
dunningLevel		☐		The dunning level of the document.
expandApplications		☐		True if you w ant to see all dunning information regarding this document.
expandAttachments		☐		True if you w ant to see all attachments regarding this document.
expandDunningInformation		☐		
expandInvoiceAddress		☐		True if you w ant to see all information regarding the invoice address for this document.
expandTaxDetails		☐		True if you w ant to see all VAT details regarding this document.
externalReference		☐		The top part > External reference > The external reference used in AutoInvoice.
financialPeriod		☐		The financial period to w hich the transactions recorded in the document is posted. Format YYYYMM.
greaterThanValue		☐		Greater than value. The item w hich is the object for this, varies from API to API.
lastModifiedDateTime		☐		This value, generated by the system, indicates the last time the record w as modified. Use it to retrieve all records that have been modified since that time, up

vatExemptTotal	double	VAT Exempt Total	☐	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax w ith the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	☐	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerInvoiceLinesByInvoiceNumber: Visma.net Financials Customer Invoice Lines by Invoice Number

Get a specific InvoiceData for Customer InvoiceThe response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerInvoice

Label: Customer Invoice Lines by Invoice Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

The following parameters can be used to control the behaviour of the table function CustomerInvoiceLinesByInvoiceNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
invoiceNumber		☑		Identifies the Invoice

Columns of Table Function

The columns of the table function CustomerInvoiceLinesByInvoiceNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active_2	char	Account Active 2	☐	
account_active	char	Account Active	☐	
account_description_2	varchar2	Account Description 2	☐	Name of item/description
account_description	varchar2	Account Description	☐	Name of item/description

				default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerInvoiceLineSubaccountSegments: Visma.net Financials Customer Invoice Line Subaccount Segments

Get a range of Invoices - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeChange log:2020-May:Added forced paginationData for Customer Invoice

Catalog: VismaNet

Schema: CustomerInvoice

Label: Customer Invoice Line Subaccount Segments

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerInvoiceLineSubaccountSegments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
branch		☐		Filter by Branch

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Required	Default Value	Documentation
closedFinancialPeriod		☐		The date of the closing of the financial period.
createdDateTime		☐		This value, generated by the system, indicates the creation date and time. Use it to retrieve all records that have been created since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
createdDateTimeCondition		☐		This value represents the condition to be applied w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
customer		☐		Filter by Customer
customerRefNumber		☐		The top part > External reference > The external reference used in AutoInvoice.
documentDate		☐		This value indicates the document date. Use it to retrieve all records that have the Document Date since that time, up to the future.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```_Note:_ __DocumentDate__ and __DocumentDateCondition__ are __mutually inclusive__.
documentDateCondition		☐		This value represents the condition to be applied to the Document Date w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __DocumentDate__ and __DocumentDateCondition__ are __mutually inclusive__.
documentDueDate		☐		The date w hen payment for the document is due, in accordance w ith the credit terms.
documentDueDateCondition		☐		This value represents the condition to be applied to the Due

Name	Data Type	Label	Required	Documentation
segmentId	int32	Segment ID	☐	The Segment values w indow > The Top part > The ID of the segment.
segmentValue	varchar2	Segment Value	☐	The Segment values w indow > The table > The value of the segment, alphanumeric.
segmentValueDescription	varchar2	Segment Value Description	☐	The Segment values w indow > The table > The description of the segment value.
seller_description	varchar2	Seller Description	☐	Click on the magnifier. > The description.
seller_id	varchar2	Seller ID	☐	Click on the magnifier. > The identifier.
sendToAutoInvoice	char	Send to Auto-invoice	☐	The Attachment tab > Send the file to AutoInvoice > The selected files w ill be attached to the invoice.
soOrderNbr	varchar2		☐	
soOrderType	varchar2		☐	
soShipmentNbr	varchar2		☐	
startDate_2	datetime		☐	
startDate	datetime	Start Date	☐	
status	varchar2	Status	☐	The top part > Status > The status of the document, w hich can be one of the follow ing: Hold, Balanced, Voided, Scheduled, Open, Closed, Pending print, Pending email.
subaccount_active	char	Sub Account Active 2	☐	Active > The status of the identifier.
subaccount_description	varchar2	Subaccount Description	☐	Description > The description of the identifier.
subaccount_errorInfo	varchar2	Sub Account Error Message	☐	
subaccount_lastModifiedDateTime	datetime	Sub Account Last Modified	☐	System generated information.
subaccount_metadata_maxPageSize	int64	Sub Account Metadata Max Pagesize	☐	
subaccount_metadata_totalCount	int64	Sub Account Metadata Total Count	☐	
subaccount_subaccountId	int32	Sub Account ID	☐	SubID > The identifier of the subaccount.
subaccount_subaccountNumber	varchar2	Sub Account Number	☐	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
subaccount_timeStamp	blob		☐	The timestamp of the subaccount, used for concurrency control.
subaccountId	int32		☐	SubID > The identifier of the subaccount.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
subaccountNumber	varchar2		☐	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
termEndDate	datetime	Term End Date	☐	Term end date > The date when the process of the deferred revenue recognition should finish for the selected item; this date can be specified manually if the deferral code assigned to the item is based on the Flexible by periods, prorate by days or Flexible by days in period recognition method.This column only appears if the Deferred revenue management functionality is enabled in the(CS100000) window.
termStartDate	datetime	Term Start Date	☐	Term start date > The date when the process of deferred revenue recognition should start for the selected item; this date can be specified manually if the deferral code assigned to the item is based on the Flexible by periods, prorate by days or Flexible by days in period recognition method.This column only appears if the Deferred revenue management functionality is enabled in the(CS100000) window.
timeStamp_2	blob		☐	Identifier that represents a specific version of the resource.It helps to prevent simultaneous updates of the resource from overwriting each other (by using ETags and If-Match headers)
timeStamp	blob	Timestamp	☐	The timestamp of the subaccount, used for concurrency control.
typeOfWork_description	varchar2		☐	
typeOfWork_rutRotType	varchar2		☐	
typeOfWork_xmlTag	varchar2		☐	
unitPrice	double		☐	Unit price > The unit price set for the item or service. If you want to update the unit priceautomatically to the current value(that is, the applicable sales or default price),you can use the Recalculate Prices and Discounts action.If you have modifiedthe unit price and saved the document, the value will not be updated by thesystem if you change the document date.
unitPriceInCurrency	double	Unit Price in Currency	☐	Background calculation giving you the Unit price in your default currency. This field is applicable

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				if the amount is given in another currency than your default.
uom	varchar2	Unit of Measure	☐	UoM > The unit of measure (UoM) for the item.
vatCode_description	varchar2	VAT Code Description	☐	Click on the magnifier. > The description.
vatCode_id	varchar2	VAT Code ID	☐	Click on the magnifier. > The identifier.
vatExemptTotal	double	VAT Exempt Total	☐	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax w ith the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	☐	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerInvoiceLineSubaccountSegmentsByInvoiceNumber: Visma.net Financials Customer Invoice Line Subaccount Segments by Invoice Number

Get a specific InvoiceData for Customer InvoiceThe response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerInvoice

Label: Customer Invoice Line Subaccount Segments by Invoice Number

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerInvoiceLineSubaccountSegmentsByInvoiceNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
invoiceNumber		☑		Identifies the Invoice

Columns of Table Function

The columns of the table function CustomerInvoiceLineSubaccountSegmentsByInvoiceNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active_2	char	Account Active 2	☐	
account_active	char	Account Active	☐	
account_description_2	varchar2	Account Description 2	☐	Name of item/description
account_description	varchar2	Account Description	☐	Name of item/description
account_externalCode1_2	varchar2	Account External Code 1 2	☐	Account class > The identifier of the account class.
account_externalCode1	varchar2	Account External Code 1	☐	Account class > The identifier of the account class.
account_externalCode2_2	varchar2	Account External Code 2 2	☐	Account class > The name of the account class.
account_externalCode2	varchar2	Account External Code 2	☐	Account class > The name of the account class.
account_number_2	varchar2	Account Number 2	☐	Number of item
account_number	varchar2	Account Number	☐	Number of item
account_type_2	varchar2	Account Type 2	☐	Account > The account number.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
account_type	varchar2	Account Type	☐	Account > The account number.
accountingCostRef	varchar2		☐	
active	char	Active	☐	Active > The status of the identifier.
amount_2	double		☐	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 w indow .If the check box is cleared, then the value appears w hen the document status is Open.
amount	double	Amount	☐	Amount > The amount after the discount has been applied. The value of this read-only boxis calculated automatically by deducting the discount amount from the extended price.
amountInCurrency_2	double	Amount in Currency 2	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
amountInCurrency	double	Amount in Currency	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in another currency than your default.
balance	double	Balance	☐	The top part > Balance > For an open customer ledger document, the balance after any cash discount w as taken. For a document used in the application process, this is the balance after the payments w ere applied.
balanceInCurrency	double	Balance in Currency	☐	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name_2	varchar2	Branch Number Name 2	☐	Click the magnifier. > The name.
branchNumber_name	varchar2	Branch Name	☐	Click the magnifier. > The name.
branchNumber_number_2	varchar2	Branch Number 2	☐	Click the magnifier. > The identifier.
branchNumber_number	varchar2	Branch Number	☐	Click the magnifier. > The identifier.
cashAccount	varchar2	Cash Account	☐	Financial details tab > The payment information section > Cash account > The cash

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				account associated w ith the payment method.
cashDiscount	double	Cash Discount	☐	The top part > Cash discount > The cash discount amount that has been or w ill be taken on the document, w hich the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	☐	Mandatory field: The top part > Cash discount date * > The end date of the cash discount period, w hich the system calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	☐	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
childRecord_name	varchar2		☐	Click the magnifier. > The name.
childRecord_number	varchar2		☐	Click the magnifier. > The identifier.
closedFinancialPeriod	varchar2	Closed Financial Period	☐	Format YYYYMM.
COMPANY_CODE	varchar2(30)	Company Code	☑	Partition code, segmenting the data.
COMPANY_NAME	varchar2(240)	Company Name	☑	Name of the partition.
contact_id	int32	Contact ID	☐	Click the magnifier > The identifier
contact_name	varchar2	Contact Name	☐	Click the magnifier > The displayed name
contractDocRef	varchar2		☐	
cost	double	Cost	☐	Cost > The total cost of the line in default currency. The value w ill alw ays be 0 for unreleased documents.
createdDateTime	datetime	Created	☐	The Attachments tab > Creation time > The date the attachment w as created.
creditTerms_description	varchar2	Credit Terms Description	☐	Click on the magnifier. > The description.
creditTerms_id	varchar2	Credit Terms ID	☐	Click on the magnifier. > The identifier.
currencyId	varchar2	Currency ID	☐	The top part > Currency > The currency of the document. By default, it is the customer's default currency,but it can be changed if the Allow Currency Override check box is selected in the AR303000 w indow .
customer_name	varchar2	Customer Name	☐	Click the magnifier. > The name.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
customer_number	varchar2	Customer Number	☐	
customerProject	varchar2	Customer Project	☐	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	varchar2	Custom Reference Number	☐	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	varchar2	VAT Zone Description	☐	Click on the magnifier. > The description.
customerVatZone_id	varchar2	VAT Zone ID	☐	Click on the magnifier. > The identifier.
debtCollection_caseNumber	varchar2		☐	Debt Collection Case Number
debtCollection_caseStatus	varchar2		☐	Debt Collection Case Number
debtCollection_caseType	varchar2		☐	Debt Collection Case Number
debtCollection_caseUrl	varchar2		☐	Debt Collection Case Number
deductableAmount	double		☐	
deferralCode	varchar2		☐	The deferral code assigned to the stock item or non-stock item specified in thisdocument line.Upon release of the document, the system generates a deferralschedule (or schedules) based on the settings defined in this deferral code.
deferralSchedule	int32		☐	Original deferral schedule > A read-only column filled in by the system in the Cash return documents created by the reversing process. It show s the identifier of the deferral schedule associated w ith the original Cash sale document.
description_2	varchar2	Description 2	☐	Transaction descr. > Any brief comment relevant to the transaction.The alphanumeric string may contain up to 30 characters.
description	varchar2	Description	☐	Description > The description of the identifier.
detailTotal	double	Detail Total	☐	The top part > Detail total > The document total, w hich the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	☐	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
directDebitMandate_id	guid		☐	Mandate Guid as stored in the database.
directDebitMandate_mandateDescription	varchar2		☐	Mandate description show on Billing Address tab

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
directDebitMandate_mandateId	varchar2		☐	The id show n on Billing Address tab
discountAmount	double		☐	Discount amount > The amount of the line-level discount that has been applied manually orautomatically to this line.The system selects the Manual Discount check boxand calculates the line amount after you have entered the discount amountmanually and save your changes or added a new line.
discountAmountInCurrency	double		☐	Background calculation giving you the Discount amount in your default currency. This field is applicable if the amount is given in another currency than your default.
discountCode	varchar2	Discount Code	☐	The code of the line discount that has been applied to this line automatically or manually.
discountPercent	double	Discount Percent	☐	Discount percent > The percent of the line-level discount that has been applied manually orautomatically.The system selects the Manual Discount check box andcalculates the discount amount after you have entered the percent manually andsaved your changes or added a new line.
discountTotal	double	Discount Total	☐	The top part > Discount total > The document discount total.
discountTotalInCurrency	double	Discount Total in Currency	☐	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	☐	The top part > Date* > The date w hen the customer ledger document w as created.By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	☐	Mandatory field: The top part > Due date* > The date w hen payment for the document is due, in accordance w ith the credit terms.
documentType	varchar2	Document Type	☐	The top part > Type > The document type. The follow ing types are available: invoice, debit note, credit note, overdue charge, credit w rite-off
dontEmail	char	Don't Email	☐	
dontPrint	char	Don't Print	☐	

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
dunningLetterDate	datetime	Dunning Letter Date	☐	The Financial details tab > The dunning info section > Dunning letter date > The date of the last released dunning letter in w hich the document w as listed.
dunningLetterLevel	int32	Dunning Letter Level	☐	The Financial details tab > The dunning info section > Dunning level > The dunning level of the document.
endDate_2	datetime		☐	
endDate	datetime	End Date	☐	
errorInfo_2	varchar2	Error Information 2	☐	
errorInfo	varchar2	Error Message	☐	
exchangeRate	double	Exchange Rate	☐	
excludeDebtCollection	char		☐	Exclude Debt Collection for Autocollect
externalLink	varchar2		☐	
externalReference	varchar2	External Reference	☐	The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	varchar2	Financial Period	☐	The financial period to w hich the transactions recorded in the document should be posted. Format YYYYMM.
hold	char	Hold	☐	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document w ith the On Hold status may be edited and cannot be released.
inventoryNumber	varchar2	Inventory Number	☐	Item ID > The item ID of the line item, if applicable. Only a non-stock item can be selected.
invoiceAddress_addressId	int32	Invoice Address ID	☐	
invoiceAddress_addressLine1	varchar2	Invoice Address Line 1	☐	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	varchar2	Invoice Address Line 2	☐	Address 2 > The second line of the address.
invoiceAddress_addressLine3	varchar2	Invoice Address Line 3	☐	Address 3 > The third line of the address.
invoiceAddress_city	varchar2	Invoice Address City	☐	City > The city.
invoiceAddress_country_errorInfo	varchar2	Invoice Address Country Error Information	☐	
invoiceAddress_country_id	varchar2	Invoice Address Country ID	☐	Mandatory field: Country ID* > The unique tw o-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		☐	

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
invoiceAddress_country_metadata_totalCount	int64		☐	
invoiceAddress_country_name	varchar2	Invoice Address Country Name	☐	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	varchar2	Invoice Address County ID	☐	Click the magnifier > The identifier
invoiceAddress_county_name	varchar2	Invoice Address County Name	☐	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	char		☐	Override address > A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	varchar2	Invoice Address Postal Code	☐	Postcode > The postcode.
invoiceContact_attention	varchar2	Invoice Contact Attention	☐	
invoiceContact_businessName	varchar2		☐	
invoiceContact_contactId	int32	Invoice Contact ID	☐	
invoiceContact_email	varchar2	Invoice Contact Email Address	☐	
invoiceContact_overrideContact	char		☐	
invoiceContact_phone1	varchar2	Invoice Contact Phone 1	☐	
invoiceText	varchar2	Invoice Text	☐	The top part > Invoice text > Any user-provided description of the customer ledger document.
isRotRutDeductible_2	char	Is ROTRUT Deductible 2	☐	The top part > Domestic services deductible document > A check box indicating if the document is Rot/rut deductible (applicable for the Swedish markets)
isRotRutDeductible	char		☐	
itemType	varchar2	Item Type	☐	
lastModifiedDateTime_2	datetime	Last Modified Date/Time 2	☐	System generated field for last modification date/time of document.
lastModifiedDateTime	datetime	Last Modified	☐	System generated information.
lineNumber	int32	Line Number	☐	Line no. > A counter of lines in the overview of cash sales document overview.
lineType	varchar2	Line Type	☐	Transaction line type.Possible Values:-> Inventory = "GI";-> NonInventory = "GN";-> MiscCharge = "MI";-> Freight = "FR";-> Discount = "DS";-> Reallocation = "RA";
location_countryId	varchar2	Location Country ID	☐	Location*.
location_id	varchar2	Location ID	☐	Click the magnifier > The identifier

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
location_name	varchar2	Location Name	☐	Click the magnifier > The displayed name
manualAmount	double	Manual Amount	☐	Manual amount > a check box indicating that the amount has been entered manually.
manualAmountInCurrency	double		☐	Background calculation giving you the Manual amount in your default currency. This field is applicable if the amount is given in another currency than your default.
manualDiscount	char	Manual Discount	☐	Manual discount > A check box that indicates (if selected) that the discount has been appliedmanually.If you clear the check box, the system clears entered discount percent,or discount amount, or selected discount code.
metadata_maxPageSize_2	int64		☐	
metadata_maxPageSize	int64	Metadata Max Pagesize	☐	
metadata_totalCount_2	int64		☐	
metadata_totalCount	int64	Total Count	☐	
note_2	varchar2	Note 2	☐	Icon Notes on top of the w indow > Pop-up w indow for providing any user-defined text connected to the document.
note	varchar2	Note	☐	Table > Icon Notes > Pop-up w indow for providing any user-defined text connected to the order.
originatorDocRef	varchar2		☐	
origInvoiceDate	datetime	Original Invoice Date	☐	The top part > Orig invoice date > The date based on w hich the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences.By default, for a new document, it is the current business date, but you can change the date.

This total is calculated as the taxable amount for the tax w ith the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	☐	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerInvoicePrintByRefNumber: Visma.net Financials Customer Invoice Print by Reference Number

Get the print report of a Customer InvoiceThe File is in Content of the message

Catalog: VismaNet

Schema: CustomerInvoice

Label: Customer Invoice Print by Reference Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerInvoicePrintByRefNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
refNbr		☑		Identifies the customer invoice

Name	Data Type	Label	Required	Documentation
				is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerInvoiceSubaccountSegments: Visma.net Financials Customer Invoice Subaccount Segments

Get a range of Invoices - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeChange log:2020-May:Added forced paginationData for Customer Invoice

Catalog: VismaNet

Schema: CustomerInvoice

Label: Customer Invoice Subaccount Segments

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerInvoiceSubaccountSegments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
branch		☐		Filter by Branch
closedFinancialPeriod		☐		The date of the closing of the financial period.
createdDateTime		☐		This value, generated by the system, indicates the creation date and time. Use it to retrieve all records that have been created since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
createdDateTimeCondition		☐		This value represents the condition to be applied w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
customer		☐		Filter by Customer
customerRefNumber		☐		The top part > External reference > The external reference used in AutoInvoice.
documentDate		☐		This value indicates the document date. Use it to retrieve all records that have the Document Date since that time, up to the future.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```_Note:_ __DocumentDate__ and __DocumentDateCondition__ are __mutually inclusive__.
documentDateCondition		☐		This value represents the condition to be applied to the Document Date w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __DocumentDate__

paymentReference		☐		The top part > Payment ref. > The reference number of the document, as automatically generated by the system in accordance w ith the number series assigned to cash sales in the Customer ledger preferences w indow ..
project		☐		The project w ith w hich the document is associated.
released		☐		Parameter for show ing if invoice has been released or not.
status		☐		The status of the document. Use the dropdow n to select status. (Values: Hold, Balanced, Voided, Scheduled, Open, Closed, PendingPrint, PendingEmail, CreditHold, CcHold, Reserved)

Columns of Table Function

The columns of the table function CustomerInvoiceSubaccountSegments are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active	char	Account Active	☐	
account_description	varchar2	Account Description	☐	Name of item/description
account_externalCode1	varchar2	Account External Code 1	☐	Account class > The identifier of the account class.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
account_externalCode2	varchar2	Account External Code 2	☐	Account class > The name of the account class.
account_number	varchar2	Account Number	☐	Number of item
account_type	varchar2	Account Type	☐	Account > The account number.
accountingCostRef	varchar2		☐	
active	char	Active	☐	Active > The status of the identifier.
amount	double	Amount	☐	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 w indow .If the check box is cleared, then the value appears w hen the document status is Open.
amountInCurrency	double	Amount in Currency	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
balance	double	Balance	☐	The top part > Balance > For an open customer ledger document, the balance after any cash discount w as taken. For a document used in the application process, this is the balance after the payments w ere applied.
balanceInCurrency	double	Balance in Currency	☐	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name	varchar2	Branch Name	☐	Click the magnifier. > The name.
branchNumber_number	varchar2	Branch Number	☐	Click the magnifier. > The identifier.
cashAccount	varchar2	Cash Account	☐	Financial details tab > The payment information section > Cash account > The cash account associated w ith the payment method.
cashDiscount	double	Cash Discount	☐	The top part > Cash discount > The cash discount amount that has been or w ill be taken on the document, w hich the system calculates based on the specified credit terms.
cashDiscountDate	datetime	Cash Discount Date	☐	Mandatory field: The top part > Cash discount date * > The end date of the cash discount period, w hich the system

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				calculates by using the credit terms.
cashDiscountInCurrency	double	Cash Discount in Currency	☐	Background calculation giving you the Cash discount in your default currency. This field is applicable if the amount is given in another currency than your default.
childRecord_name	varchar2		☐	Click the magnifier. > The name.
childRecord_number	varchar2		☐	Click the magnifier. > The identifier.
closedFinancialPeriod	varchar2	Closed Financial Period	☐	Format YYYYMM.
COMPANY_CODE	varchar2(30)	Company Code	☑	Partition code, segmenting the data.
COMPANY_NAME	varchar2(240)	Company Name	☑	Name of the partition.
contact_id	int32	Contact ID	☐	Click the magnifier > The identifier
contact_name	varchar2	Contact Name	☐	Click the magnifier > The displayed name
contractDocRef	varchar2		☐	
createdDateTime	datetime	Created	☐	The Attachments tab > Creation time > The date the attachment w as created.
creditTerms_description	varchar2	Credit Terms Description	☐	Click on the magnifier. > The description.
creditTerms_id	varchar2	Credit Terms ID	☐	Click on the magnifier. > The identifier.
currencyId	varchar2	Currency ID	☐	The top part > Currency > The currency of the document. By default, it is the customer's default currency,but it can be changed if the Allow Currency Override check box is selected in the AR303000 w indow .
customer_name	varchar2	Customer Name	☐	Click the magnifier. > The name.
customer_number	varchar2	Customer Number	☐	
customerProject	varchar2	Customer Project	☐	The top part > Customer project no. > The customer project no. used in AutoInvoice.
customerRefNumber	varchar2	Custom Reference Number	☐	The top part > External reference > The external reference used in AutoInvoice.
customerVatZone_description	varchar2	VAT Zone Description	☐	Click on the magnifier. > The description.
customerVatZone_id	varchar2	VAT Zone ID	☐	Click on the magnifier. > The identifier.
debtCollection_caseNumber	varchar2		☐	Debt Collection Case Number
debtCollection_caseStatus	varchar2		☐	Debt Collection Case Number

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
debtCollection_caseType	varchar2		☐	Debt Collection Case Number
debtCollection_caseUrl	varchar2		☐	Debt Collection Case Number
description	varchar2	Description	☐	Description > The description of the identifier.
detailTotal	double	Detail Total	☐	The top part > Detail total > The document total, which the system calculates for all line items in the Document details tab.
detailTotalInCurrency	double	Detail Total in Currency	☐	Background calculation giving you the Detail total in your default currency. This field is applicable if the amount is given in a another currency than your default.
directDebitMandate_id	guid		☐	Mandate Guid as stored in the database.
directDebitMandate_mandateDescription	varchar2		☐	Mandate description show on Billing Address tab
directDebitMandate_mandateId	varchar2		☐	The id shown on Billing Address tab
discountTotal	double	Discount Total	☐	The top part > Discount total > The document discount total.
discountTotalInCurrency	double	Discount Total in Currency	☐	The top part > Discount total > The document discount total in your default currency. This field is applicable if the amount is given in a another currency than your default.
documentDate	datetime	Document Date	☐	The top part > Date* > The date when the customer ledger document was created.By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	☐	Mandatory field: The top part > Due date* > The date when payment for the document is due, in accordance with the credit terms.
documentType	varchar2	Document Type	☐	The top part > Type > The document type. The following types are available: invoice, debit note, credit note, overdue charge, credit write-off
dontEmail	char	Don't Email	☐	
dontPrint	char	Don't Print	☐	
dunningLetterDate	datetime	Dunning Letter Date	☐	The Financial details tab > The dunning info section > Dunning letter date > The date of the last released dunning letter in which the document was listed.
dunningLetterLevel	int32	Dunning Letter Level	☐	The Financial details tab > The dunning info section >

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
				Dunning level > The dunning level of the document.
endDate	datetime	End Date	☐	
errorInfo_2	varchar2	Error Information 2	☐	
errorInfo	varchar2	Error Message	☐	
exchangeRate	double	Exchange Rate	☐	
excludeDebtCollection	char		☐	Exclude Debt Collection for Autocollect
externalReference	varchar2	External Reference	☐	The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	varchar2	Financial Period	☐	The financial period to which the transactions recorded in the document should be posted. Format YYYYMM.
hold	char	Hold	☐	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document with the On Hold status may be edited and cannot be released.
invoiceAddress_addressId	int32	Invoice Address ID	☐	
invoiceAddress_addressLine1	varchar2	Invoice Address Line 1	☐	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	varchar2	Invoice Address Line 2	☐	Address 2 > The second line of the address.
invoiceAddress_addressLine3	varchar2	Invoice Address Line 3	☐	Address 3 > The third line of the address.
invoiceAddress_city	varchar2	Invoice Address City	☐	City > The city.
invoiceAddress_country_errorInfo	varchar2	Invoice Address Country Error Information	☐	
invoiceAddress_country_id	varchar2	Invoice Address Country ID	☐	Mandatory field: Country ID* > The unique two-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		☐	
invoiceAddress_country_metadata_totalCount	int64		☐	
invoiceAddress_country_name	varchar2	Invoice Address Country Name	☐	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	varchar2	Invoice Address County ID	☐	Click the magnifier > The identifier
invoiceAddress_county_name	varchar2	Invoice Address County Name	☐	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	char		☐	Override address > A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
invoiceAddress_postalCode	varchar2	Invoice Address Postal Code	☐	Postcode > The postcode.
invoiceContact_attention	varchar2	Invoice Contact Attention	☐	
invoiceContact_businessName	varchar2		☐	
invoiceContact_contactId	int32	Invoice Contact ID	☐	
invoiceContact_email	varchar2	Invoice Contact Email Address	☐	
invoiceContact_overrideContact	char		☐	
invoiceContact_phone1	varchar2	Invoice Contact Phone 1	☐	
invoiceText	varchar2	Invoice Text	☐	The top part > Invoice text > Any user-provided description of the customer ledger document.
isRotRutDeductible	char		☐	The top part > Domestic services deductible document > A check box indicating if the document is Rot/rut deductible (applicable for the Swedish markets)
lastModifiedDateTime_2	datetime	Last Modified Date/Time 2	☐	System generated field for last modification date/time of document.
lastModifiedDateTime	datetime	Last Modified	☐	System generated information.
location_countryId	varchar2	Location Country ID	☐	Location*.
location_id	varchar2	Location ID	☐	Click the magnifier > The identifier
location_name	varchar2	Location Name	☐	Click the magnifier > The displayed name
metadata_maxPageSize_2	int64		☐	
metadata_maxPageSize	int64	Metadata Max Pagesize	☐	
metadata_totalCount_2	int64		☐	
metadata_totalCount	int64	Total Count	☐	
note	varchar2	Note	☐	Icon Notes on top of the window > Pop-up window for providing any user-defined text connected to the document.
originatorDocRef	varchar2		☐	
origInvoiceDate	datetime	Original Invoice Date	☐	The top part > Orig invoice date > The date based on which the Due date and Cash discount date is calculated. Only used if setting "Use Orig Invoice Date" is active in AR Preferences.By default, for a new document, it is the current business date, but you can change the date.
paymentMethod_description	varchar2	Payment Method Description	☐	Click on the magnifier. > The description.

CustomerInvoiceTaxDetails: Visma.net Financials Customer Invoice Tax Details

Get a range of Invoices - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeChange log:2020-May:Added forced paginationData for Customer Invoice

Catalog: VismaNet

Schema: CustomerInvoice

Label: Customer Invoice Tax Details

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerInvoiceTaxDetails. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
branch		☐		Filter by Branch
closedFinancialPeriod		☐		The date of the closing of the financial period.
createdDateTime		☐		This value, generated by the system, indicates the creation date and time. Use it to retrieve all records that have been created since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
createdDateTimeCondition		☐		This value represents the condition to be applied w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for

vatAmount	double	VAT Amount	☐	VAT > The VAT amount for the specific VAT, w hich is calculated at the document level.
vatExemptTotal	double	VAT Exempt Total	☐	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax w ith the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	☐	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatId_description	varchar2		☐	Name of item/description
vatId_number	varchar2		☐	Number of item
vatRate	double	VAT Rate	☐	VAT rate > The rate of the VAT.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerInvoiceTaxDetailsByInvoiceNumber: Visma.net Financials Customer Invoice Tax Details by Invoice Number

Get a specific InvoiceData for Customer InvoiceThe response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerInvoice

Label: Customer Invoice Tax Details by Invoice Number

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerInvoiceTaxDetailsByInvoiceNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
invoiceNumber		☑		Identifies the Invoice

Columns of Table Function

The columns of the table function CustomerInvoiceTaxDetailsByInvoiceNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active	char	Account Active	☐	
account_description	varchar2	Account Description	☐	Name of item/description
account_externalCode1	varchar2	Account External Code 1	☐	Account class > The identifier of the account class.
account_externalCode2	varchar2	Account External Code 2	☐	Account class > The name of the account class.
account_number	varchar2	Account Number	☐	Number of item
account_type	varchar2	Account Type	☐	Account > The account number.
accountingCostRef	varchar2		☐	
amount	double	Amount	☐	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 w indow .If the check box is cleared, then the value appears w hen the document status is Open.

Catalog: VismaNet

Schema: CustomerOverdueCharge

Label: Customer Overdue Charge Applications

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerOverdueChargeApplications. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
branch		☐		Filter by Branch
closedFinancialPeriod		☐		The date of the closing of the financial period.
createdDateTime		☐		This value, generated by the system, indicates the creation date and time. Use it to retrieve all records that have been created since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
createdDateTimeCondition		☐		This value represents the condition to be applied w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.

CustomerOverdueChargeAttachmentsByOverdueChargeNumber: Visma.net Financials Customer Overdue Charge Attachments by Overdue Charge Number

Get a specific Customer Overdue ChargeData for Customer Overdue Charge The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerOverdueCharge

Label: Customer Overdue Charge Attachments by Overdue Charge Number

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerOverdueChargeAttachmentsByOverdueChargeNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
overdueChargeNumber		☑		Identifies the Customer Overdue Charge

vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerOverdueChargeByOverdueChargeNumber

Get a specific Customer Overdue ChargeData for Customer Overdue Charge The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerOverdueCharge

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerOverdueChargeByOverdueChargeNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
overdueChargeNumber		☑		Identifies the Customer Overdue Charge

Columns of Table Function

The columns of the table function CustomerOverdueChargeByOverdueChargeNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active	char	Account Active	☐	
account_description	varchar2	Account Description	☐	Name of item/description
account_externalCode1	varchar2	Account External Code 1	☐	Account class > The identifier of the account class.
account_externalCode2	varchar2	Account External Code 2	☐	Account class > The name of the account class.
account_number	varchar2	Account Number	☐	Number of item
account_type	varchar2	Account Type	☐	Account > The account number.
amount	double	Amount	☐	The top part > Amount > The amount paid by the document. The value appears for new documents if the Validate document totals on entry check box is selected on the AR101000 w indow .If the check box is cleared, then the value appears w hen the document status is Open.
amountInCurrency	double	Amount in Currency	☐	Background calculation giving you the Amount in your default currency. This field is applicable if the amount is given in a another currency than your default.
balance	double	Balance	☐	The top part > Balance > For an open customer ledger document, the balance after any cash discount w as taken. For a document used in the application process, this is the balance after the payments w ere applied.
balanceInCurrency	double	Balance in Currency	☐	Background calculation giving you the Balance in your default currency. This field is applicable if the amount is given in a another currency than your default.
branchNumber_name	varchar2	Branch Name	☐	Click the magnifier. > The name.

Get a specific Customer Overdue ChargeData for Customer Overdue Charge The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerOverdueCharge

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerOverdueChargeByoverdueChargeNumber_SubaccountSegments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Label	Required	Documentation
unitPriceInCurrency	double	Unit Price in Currency	☐	Background calculation giving you the Unit price in your default currency. This field is applicable if the amount is given in another currency than your default.
uom	varchar2	Unit of Measure	☐	UoM > The unit of measure (UoM) for the item.
vatCode_description	varchar2	VAT Code Description	☐	Click on the magnifier. > The description.
vatCode_id	varchar2	VAT Code ID	☐	Click on the magnifier. > The identifier.
vatExemptTotal	double	VAT Exempt Total	☐	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax w ith the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	☐	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerOverdueChargeLineAttachmentsByOverdueChargeNumber

Get a specific Customer Overdue ChargeData for Customer Overdue Charge The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerOverdueCharge

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerOverdueChargeLineAttachmentsByOverdueChargeNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
overdueChargeNumber		☑		Identifies the Customer Overdue Charge

Columns of Table Function

The columns of the table function CustomerOverdueChargeLineAttachmentsByOverdueChargeNumber are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
account_active_2	char	Account Active 2	☐	
account_active	char	Account Active	☐	
account_description_2	varchar2	Account Description 2	☐	Name of item/description

CustomerOverdueChargeLines

Get a range of Customer Overdue Charges - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeData for Customer Overdue Charge

Catalog: VismaNet

Schema: CustomerOverdueCharge

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerOverdueChargeLines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
branch		☐		Filter by Branch
closedFinancialPeriod		☐		The date of the closing of the financial period.
createdDateTime		☐		This value, generated by the system, indicates the creation date and time. vatExemptTotal	double	VAT Exempt Total	☐	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax w ith the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	☐	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerOverdueChargeLinesByOverdueChargeNumber

Get a specific Customer Overdue ChargeData for Customer Overdue Charge The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: CustomerOverdueCharge

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerOverdueChargeLinesByOverdueChargeNumber. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

				given in a another currency than your default.
documentDate	datetime	Document Date	☐	The top part > Date* > The date w hen the customer ledger document w as created.By default, for a new document, it is the current business date, but you can change the date.
documentDueDate	datetime	Document Due Date	☐	Mandatory field: The Top part > Due date* > The date w hen payment for the document is due, in accordance w ith the credit terms.
documentType	varchar2	Document Type	☐	The top part > Type > The document type. The follow ing types are available: invoice, debit note, credit note, overdue charge, credit w rite-off
dontEmail	char	Don't Email	☐	
dontPrint	char	Don't Print	☐	
dunningLetterDate	datetime	Dunning Letter Date	☐	Financial details tab > Dunning information section > Dunning letter date > The date of the last released dunning letter in w hich the document w as listed.
dunningLetterLevel	int32	Dunning Letter Level	☐	Financial details tab > Dunning information section > Dunning level > The dunning level of the document.
errorInfo	varchar2	Error Message	☐	
exchangeRate	double	Exchange Rate	☐	The top part > Currency > The currency of the document.
externalLink	varchar2		☐	
externalReference	varchar2	External Reference	☐	The top part > External reference > The external reference used in AutoInvoice.
financialPeriod	varchar2	Financial Period	☐	The financial period to w hich the transactions recorded in the document should be posted. Format YYYYMM.
hold	char	Hold	☐	The top part > Hold > A check box that indicates (if selected) that the document is a draft. A document w ith the On Hold status may be edited and cannot be released.
inventoryNumber	varchar2	Inventory Number	☐	Item ID > The item ID of the line item, if applicable. Only a non-stock item can be selected.
invoiceAddress_addressId	int32	Invoice Address ID	☐	
invoiceAddress_addressLine1	varchar2	Invoice Address Line 1	☐	Address 1 > The first line of the customer's contact address.
invoiceAddress_addressLine2	varchar2	Invoice Address Line 2	☐	Address 2 > The second line of the address.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
invoiceAddress_addressLine3	varchar2	Invoice Address Line 3	☐	Address 3 > The third line of the address.
invoiceAddress_city	varchar2	Invoice Address City	☐	City > The city.
invoiceAddress_country_errorInfo	varchar2	Invoice Address Country Error Information	☐	
invoiceAddress_country_id	varchar2	Invoice Address Country ID	☐	Mandatory field: Country ID* > The unique tw o-letter country ID according to international standard ISO 3166.
invoiceAddress_country_metadata_maxPageSize	int64		☐	
invoiceAddress_country_metadata_totalCount	int64		☐	
invoiceAddress_country_name	varchar2	Invoice Address Country Name	☐	Mandatory field: Country name* > The complete name of the country.
invoiceAddress_county_id	varchar2	Invoice Address County ID	☐	Click the magnifier > The identifier
invoiceAddress_county_name	varchar2	Invoice Address County Name	☐	Click the magnifier > The displayed name
invoiceAddress_overrideAddress	char		☐	Override address > A check box that indicates (if selected) that the invoice address is not the default invoice address of the customer.
invoiceAddress_postalCode	varchar2	Invoice Address Postal Code	☐	Postcode > The postcode.
invoiceContact_attention	varchar2	Invoice Contact Attention	☐	
invoiceContact_businessName	varchar2		☐	
invoiceContact_contactId	int32	Invoice Contact ID	☐	
invoiceContact_email	varchar2	Invoice Contact Email Address	☐	
invoiceContact_overrideContact	char		☐	
invoiceContact_phone1	varchar2	Invoice Contact Phone 1	☐	
invoiceText	varchar2	Invoice Text	☐	The top part > Invoice text > Any user-provided description of the customer ledger document.
lastModifiedDateTime	datetime	Last Modified	☐	System generated field for last modification date/time of document.
lineNumber	int32	Line Number	☐	Line no. > A counter of lines in the overview of cash sales document overview .
location_countryId	varchar2	Location Country ID	☐	Location*.
location_id	varchar2	Location ID	☐	Click the magnifier > The identifier
location_name	varchar2	Location Name	☐	Click the magnifier > The displayed name

				your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerOverdueChargeSubAccountSegmentLines

Get a range of Customer Overdue Charges - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeData for Customer Overdue Charge

Catalog: VismaNet

Schema: CustomerOverdueCharge

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerOverdueChargeSubAccountSegmentLines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
branch		☐		Filter by Branch
closedFinancialPeriod		☐		The date of the closing of the financial period.
createdDateTime		☐		This value, generated by the system, indicates the creation date and time. Use it to retrieve all records that have been created since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
createdDateTimeCondition		☐		This value represents the condition to be applied w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
customer		☐		Filter by Customer
customerRefNumber		☐		The top part > External reference > The external reference used in AutoInvoice.
documentDate		☐		This value indicates the document date. Use it to retrieve all records that have the Document Date since that time, up to the future.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```_Note:_ __DocumentDate__ and __DocumentDateCondition__ are __mutually inclusive__.

status	varchar2	Status	☐	The top part > Status > The status of the document, w hich can be one of the follow ing: Hold, Balanced, Voided, Scheduled, Open, Closed, Pending print, Pending email.
subaccount_active	char	Sub Account Active 2	☐	Active > The status of the identifier.
subaccount_description	varchar2	Subaccount Description	☐	Description > The description of the identifier.
subaccount_errorInfo	varchar2	Sub Account Error Message	☐	
subaccount_lastModifiedDateTime	datetime	Sub Account Last Modified	☐	System generated information.
subaccount_metadata_maxPageSi ze	int64	Sub Account Metadata Max Pagesize	☐	
subaccount_metadata_totalCount	int64	Sub Account Metadata Total Count	☐	
subaccount_subaccountId	int32	Sub Account ID	☐	SubID > The identifier of the subaccount.
subaccount_subaccountNumber	varchar2	Sub Account Number	☐	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.
subaccount_timeStamp	blob		☐	The timestamp of the subaccount, used for concurrency control.
subaccountId	int32		☐	SubID > The identifier of the subaccount.
subaccountNumber	varchar2		☐	Mandatory field: Subaccount* > The subaccount number. Format 9-XX.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
timeStamp_2	blob		☐	Identifier that represents a specific version of the resource.It helps to prevent simultaneous updates of the resource from overw riting each other (by using ETags and If-Match headers)
timeStamp	blob	Timestamp	☐	The timestamp of the subaccount, used for concurrency control.
unitPrice	double		☐	Unit price > The unit price set for the item or service. If you w ant to update the unit priceautomatically to the current value(that is, the applicable sales or default price),you can use the Recalculate Prices and Discounts action.If you have modifiedthe unit price and saved the document, the value w ill not be updated by thesystem if you change the document date.
unitPriceInCurrency	double	Unit Price in Currency	☐	Background calculation giving you the Unit price in your default currency. This field is applicable if the amount is given in another currency than your default.
uom	varchar2	Unit of Measure	☐	UoM > The unit of measure (UoM) for the item.
vatCode_description	varchar2	VAT Code Description	☐	Click on the magnifier. > The description.
vatCode_id	varchar2	VAT Code ID	☐	Click on the magnifier. > The identifier.
vatExemptTotal	double	VAT Exempt Total	☐	The top part > VAT exempt. total > The document total that is exempt from VAT. This total is calculated as the taxable amount for the tax w ith the Include in VAT Exempt Total check box selected on the Taxes form.This box is available only if the VAT Reporting feature is enabled in your system.
vatExemptTotalInCurrency	double	VAT Exempt Total in Currency	☐	Background calculation giving you the VAT exempt. total in your default currency. This field is applicable if the amount is given in a another currency than your default.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.
vatTaxableTotalInCurrency	double	VAT Taxable Total in Currency	☐	Background calculation giving you the VAT taxable total in your default currency. This field is applicable if the amount is given in a another currency than your default.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Name	Data Type	Label	Required	Documentation
vatTotal	double	VAT Total	☐	The top part > VAT total > The VAT amount of the document, as defined on the VAT details tab.
vatTotalInCurrency	double	VAT Total in Currency	☐	Background calculation giving you the VAT total in your default currency. This field is applicable if the amount is given in a another currency than your default.

CustomerOverdueChargeSubAccountSegments

Get a range of Customer Overdue Charges - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeData for Customer Overdue Charge

Catalog: VismaNet

Schema: CustomerOverdueCharge

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerOverdueChargeSubAccountSegments. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
branch		☐		Filter by Branch
closedFinancialPeriod		☐		The date of the closing of the financial period.
createdDateTime		☐		This value, generated by the system, indicates the creation date and time. Use it to retrieve all records that have been created since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-

CustomerOverdueChargeTaxDetails

Get a range of Customer Overdue Charges - ScreenId=AR301000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page sizeData for Customer Overdue Charge

Catalog: VismaNet

Schema: CustomerOverdueCharge

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerOverdueChargeTaxDetails. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

CustomerPaymentLines: Visma.net Financials Customer Payment Lines

Get a range of Payments. - SceenId=AR302000Request page size must be lower or equal to the allowed max page size which is returned as part of the metadata information.If requested page size is greater than allowed max page size, request will be limited to max page size

Catalog: VismaNet

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Schema: CustomerPayment

Label: Customer Payment Lines

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerPaymentLines. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
branch		☐		Filter by Branch
customer		☐		Enter Customer
docDate		☐		This value indicates the document date. Use it to retrieve all records that have the Document Date since that time, up to the future.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```* ```yyyy-MM-dd```_Note:_ __DocDate__ and __DocDateCondition__ are __mutually inclusive__.
docDateCondition		☐		This value represents the condition to be applied to the Document Date w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __DocDate__ and __DocDateCondition__ are __mutually inclusive__.
financialPeriod		☐		Filter by financial period, format YYYYPP

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function CustomerPaymentMethodDetailsByCustomerId. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the

DepartmentById: Visma.net Financials Department by ID

Get a specific departmentData for a single department. The response headers include an ETag after a successful GET operation.

Catalog: VismaNet

Schema: Department

Label: Department by ID

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function DepartmentById. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
departmentId		☑		Identifies the department

DimensionSegmentValuesById: Visma.net Financials Dimension Segment Values by ID

Get a specific Dimension

Catalog: VismaNet

Schema: Dimension

Label: Dimension Segment Values by ID

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function DimensionSegmentValuesById. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
dimensionId		☑		Identifies the dimension
expandSegmentsValues		☐		Flag can be used to return data without the segment values.
greaterThanValue		☐		Greater-than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime		☐		This value, generated by the system, indicates the last time the record was modified. Use it to retrieve all records that have been modified since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __LastModifiedDateTime__ and __LastModifiedDateTimeCondition__ are __mutually inclusive__.
lastModifiedDateTimeCondition		☐		This value represents the condition to be applied when retrieving records.Accepted values (without the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __LastModifiedDateTime__ and __LastModifiedDateTimeCondition__ are __mutually inclusive__.
orderBy		☐		This field has been deprecated and will be removed in future versions. The OrderBy parameter has no effect on the result.

DiscountRecordItemPriceClasses: Visma.net Financials Discount Record Item Price Classes

Get a range of discounts - ScreenId=AR209500

Catalog: VismaNet

Schema: Discount

Label: Discount Record Item Price Classes

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function DiscountRecordItemPriceClasses. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function DiscountCodeRecords. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
createdDateTime		☐		This value, generated by the system, indicates the creation date and time. Use it to retrieve all records that have been created since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
createdDateTimeCondition		☐		This value represents the condition to be applied w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
discountCode		☐		
lastModifiedDateTime		☐		
lastModifiedDateTimeCondition		☐		System retrieved information for state/condition.

Columns of Table Function

The columns of the table function DiscountCodeRecords are shown below. Each column has an SQL data type.

DiscountCustomerPriceClassesV2: Visma.net Financials Discount Customer Price Classes (V2)

Get a range of discounts - ScreenId=AR209500

Catalog: VismaNet

Schema: DiscountV2

Label: Discount Customer Price Classes (V2)

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function DiscountCustomerPriceClassesV2. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

DiscountCustomersV2: Visma.net Financials Discount Customers (V2)

Get a range of discounts - ScreenId=AR209500

Catalog: VismaNet

Schema: DiscountV2

Label: Discount Customers (V2)

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function DiscountCustomersV2. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
createdDateTime		☐		This value, generated by the system, indicates the creation date and time. Use it to retrieve all records that have been created since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.
createdDateTimeCondition		☐		This value represents the condition to be applied w hen retrieving records.Accepted values (w ithout the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __CreatedDateTime__ and __CreatedDateTimeCondition__ are __mutually inclusive__.

3.1.40 Schema: EarningType

3.1.40.1 Tables

EarningTypeByTypeCode: Visma.net Financials Earning Type by Type Code

Get a specific earning type

Catalog: VismaNet

Schema: EarningType

Label: Earning Type by Type Code

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function EarningTypeByTypeCode. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the

EmployeeExpenseClaimDetailAttachmentsByEmployeeCode: Visma.net Financials Employee Expense Claim Detail Attachments by Employee Code

Get expense claims for a specific employee

Catalog: VismaNet

Schema: Employee

Label: Employee Expense Claim Detail Attachments by Employee Code

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function EmployeeExpenseClaimDetailAttachmentsByEmployeeCode. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
customer		☐		The customer from the document
date		☐		The date of the document
departmentId		☐		Identifies the department
employeeCd		☑		Identifies the employee
greaterThanValue		☐		Greater-than value. The item which is the object for this, varies from API to API.
lastModifiedDateTime		☐		This value, generated by the system, indicates the last time the record was modified. Use it to retrieve all records that have been modified since that time, up to the present.Accepted format:* ```yyyy-MM-dd```* ```yyyy-MM-dd HH:mm:ss```* ```yyyy-MM-dd HH:mm:ss.FFF```* ```yyyy-MM-ddTHH:mm:ss```* ```yyyy-MM-ddTHH:mm:ss.FFF```_Note:_ __LastModifiedDateTime__ and __LastModifiedDateTimeCondition__ are __mutually inclusive__.
lastModifiedDateTimeCondition		☐		This value represents the condition to be applied when retrieving records.Accepted values (without the single quotes):* '>' for greater than* '<' for less than* '>=' for greater than or equal* '<=' for less than or equal_Note:_ __LastModifiedDateTime__ and __LastModifiedDateTimeCondition__ are __mutually inclusive__.
orderBy		☐		This field has been deprecated and will be removed in future versions. The OrderBy parameter has no effect on the result.
status		☐		The status of the document. (Values: Hold, PendingApproval, Approved, Rejected, Released)

Columns of Table Function

The columns of the table function EmployeeExpenseClaimDetailAttachmentsByEmployeeCode are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
amountInClaimCurr	double		☐	Amount in claim currency > The amount claimed by the

				parameter has no effect on the result.
status		☐		The status of the document. (Values: Hold, PendingApproval, Approved, Rejected, Released)

Columns of Table Function

The columns of the table function EmployeeExpenseClaimsByEmployeeCode are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
approvalDate	datetime	Approval Date	☐	The top part > Approval date > The date w hen the claim w as approved.
approvalStatus	varchar2	Approval Status	☐	The top part > Approval status > The status of the claim in Approval.
approvalStatusText	varchar2	Approval Status Text	☐	The top part > Approval status > A text field.
claimedBy_internalId	varchar2	Claimed by - Internal ID	☐	
claimedBy_name	varchar2	Claimed by - Name	☐	The name of the particular destination of the selected type.
claimedBy_number	varchar2	Claimed by - Number	☐	The identifier of the particular destination of the selected type.
claimTotal	double	Claim Total	☐	The top part > Claim total > The total amount of the claim.
COMPANY_CODE	varchar2(30)	Company Code	☑	Partition code, segmenting the data.
COMPANY_NAME	varchar2(240)	Company Name	☑	Name of the partition.
currency	varchar2	Currency	☐	The top part > Currency > The currency of the claim.
customer_name	varchar2	Customer Name	☐	Click the magnifier. > The name.
customer_number	varchar2	Customer Number	☐	
date	datetime	Date	☐	Mandatory field: The top part > Date* > The date w hen the claim w as entered.
department_description	varchar2	Department Description	☐	Click on the magnifier. > The description.
department_id	varchar2	Department ID	☐	Click on the magnifier. > The identifier.
description	varchar2	Description	☐	Mandatory field: The top part > Description > A description of the claim.
errorInfo	varchar2	Error Message	☐	
lastModifiedDateTime	datetime	Last Modified	☐	System generated information: The lastest time the expense claim w as modified

Name	Data Type	Label	Required	Documentation
location_description	varchar2	Location Description	☐	Click on the magnifier. > The description.
location_id	varchar2	Location ID	☐	Click on the magnifier. > The identifier.
metadata_maxPageSize	int64	Metadata Max Pagesize	☐	
metadata_totalCount	int64	Total Count	☐	
refNbr	varchar2	Reference Number	☐	The top part > Ref. no. > The unique reference number of the expense claim document.
status	varchar2	Status	☐	The top part > Status > The current status of the expense claim: On Hold/Pending Approval/Approved/Rejected/Released.
timeStamp	blob	Timestamp	☐	Identifier that represents a specific version of the resource.It helps to prevent simultaneous updates of the resource from overw riting each other (by using ETags and If-Match headers)
vatExemptTotal	double	VAT Exempt Total	☐	The top part > VAT exempt total > The document total that is exempt from VAT.
vatTaxableTotal	double	VAT Taxable Total	☐	The top part > VAT taxable total > The document total that is subjected to VAT.

EmployeeExpenseReceiptClaimsByEmployeeId

Get expense receipts for a specific employee

Catalog: VismaNet

Schema: Employee

This is a read-only table function. The Visma.net Financials API may not support changing the data or the Invantive UniversalSQL driver for Visma.net Financials does not cover it. In the latter case, please use the table NativePlatformScalarRequests to upload data to the Visma.net Financials API.

Parameters of Table Function

The following parameters can be used to control the behaviour of the table function EmployeeExpenseReceiptClaimsByEmployeeId. A value must be provided at all times for required parameters, but optional parameters in general do not need to have a value and the execution will default to a pre-defined behaviour. Values can be specified by position and by name. In both cases, all parameters not specified will be evaluated using their default values.

Value specification by position is done by listing all values from the first to the last needed value. For example: a `select * from table(value1, value2, value3)` on a table with four parameters will use the default value for the fourth parameter and the specified values for the first three.

(C) Copyright 2004-2025 Invantive Software B.V., the Netherlands. All rights reserved.

Value specification by name is done by listing all values that require a value. For example with `select * from table(name1 => value1, name3 => value3)` on the same table will use the default values for the second and fourth parameters and the specified values for the first and third.

Name	Data Type	Required	Default Value	Documentation
claimedBy		☐		Identifies the employee from the document
customer		☐		Identifies the customer from the document
date		☐		The date of the document
dateCondition		☐		
employeeCd		☑		Identifies the employee
inventory		☐		Identifies the inventory item from the document
invoiceable		☐		If the document is invoiceable
project		☐		Identifies the project from the document
projectTask		☐		Filter on Task ID.
status		☐		The status of the document. (Values: Open, Pending, Approved, Rejected, Released)

Columns of Table Function

The columns of the table function EmployeeExpenseReceiptClaimsByEmployeeId are shown below. Each column has an SQL data type.

Name	Data Type	Label	Required	Documentation
address_addressId	int32	Address ID	☐	
address_addressLine1	varchar2	Address Line 1	☐	Address 1 > The first line of the customer's/supplier's/company's/ employee's contact address.
address_addressLine2	varchar2	Address Line 2	☐	Address 2 > The second line of the address.
address_addressLine3	varchar2	Address Line 3	☐	Address 3 > The third line of the address.
address_city	varchar2	City	☐	City > The city.
address_country_errorInfo	varchar2		☐	
address_country_id	varchar2	Country ID	☐	Mandatory field: Country ID* > The unique tw o-letter country ID according to international standard ISO 3166.
address_country_metadata_maxP ageSize	int64		☐	
address_country_metadata_totalC ount	int64		☐	
address_country_name	varchar2	Country Name	☐	Mandatory field: Country name* > The complete name of the
